

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

In the Introduction to this Dictionary, may be found remarks on orthoëpy or pronunciation, orthography, etymology or the derivation of words, grammar, archaisms, provincialisms, Americanisms, and on various other points of philology and lexicography, and also explanations of the principles adopted in the preparation of the work. Prefatory observations are also prefixed to the enlarged edition of Walker's "Key," inserted in this volume, and likewise to the Pronouncing Vocabulary of Modern Geographical Names. To these several introductory pages the reader is referred for various explanations and remarks, which it is unnecessary here to repeat.

In relation to etymology, or the derivation of English words, the general rule which has been followed is, to give the etymons of such words as are derived from languages foreign to the English, namely, the Greek, Latin, French, Spanish, Italian, Dutch, German, Danish, Swedish, &c. The Anglo-Saxon being the mother tongue of the English, and the greater part of the English words which are of most frequent occurrence being derived from that language, with more or less change of their orthography, the etymology of these words of Anglo-Saxon origin is, for the most part, omitted.

Much attention has been bestowed on the subject of orthoëpy or pronunciation; and, with regard to words of various, doubtful, or disputed pronunciation, the authorities for the different modes are exhibited; so that this Dictionary will show the reader in what manner these words are pronounced by all the most eminent English orthoëpists. With respect to words variously pronounced, Walker says, "The only method of knowing the extent of custom in these cases, seems to be an inspection of those dictionaries which professedly treat of pronunciation. We have now so many works of this kind, that the general current of custom, with respect to the sound of words, may be collected from them with almost as much certainty as the general sense of words from Johnson. An exhibition of the opinions of orthoëpists about the sound of words, always appeared to me a very rational method of determining what is called custom. This method I have adopted." The method thus countenanced by Walker has been pursued, in this Dictionary, much further than he had the means of doing it, inasmuch as most of the works which are made use of, as the principal authorities, have been published since his time. With respect to many of the words about the pronunciation

of which orthoëpists differ, it is difficult to decide which mode is to be preferred ; and it is not to be supposed that the mode for which the Compiler has indicated a preference, will, in all cases, be esteemed the best ; but when it is not, the reader will find the mode which he may prefer, supported by its proper authority.

About twenty years since, the Compiler edited "Johnson's Dictionary, as improved by Todd, and abridged by Chalmers, with Walker's Pronouncing Dictionary combined ;" and while executing that task, he formed the plan of his small work, entitled, "A Comprehensive Pronouncing and Explanatory Dictionary of the English Language ;" but before completing this latter work, he was induced to undertake the labor of making the octavo abridgment of Dr. Webster's "American Dictionary of the English Language." These tasks of editing and abridging were performed in accordance with certain principles and rules laid down by the publishers of the former work and by the author of the latter ; and as to the selection of words, their orthography, etymology, pronunciation, or definition, or as to any want of consistency of the two works with each other, the Editor and Abridger had no responsibility, further than was implied by the rules prescribed for his guidance.

After beginning the preparation of his "Comprehensive Dictionary," the Compiler adopted the practice of recording all the English words which he met with, used by respectable authors, and not found in Todd's edition of Johnson's Dictionary. This practice was continued with a view to provide the means of improving the "Comprehensive Dictionary." But he found the words which were not registered in any dictionary more numerous than he anticipated, and, his collection having accumulated beyond his expectation, he at length formed the design of preparing a new and larger dictionary, which should contain as complete a vocabulary of the language as he should be able to make.

The Dictionary of Johnson, as corrected and enlarged by Todd, and Walker's Critical Pronouncing Dictionary, have been made, in some degree, the basis of the present work ; but the words found in those dictionaries have been revised with much labor and care, in relation to their orthography, pronunciation, etymology, definition, &c. ; and a great part of them, especially such as relate to the arts and sciences, have been defined entirely anew. Such of the words found in Todd's Johnson as are in common use, familiar to all who read and speak the language, and with regard to the propriety and use of which there can be no doubt, are, for the most part, left without any cited authority ; but for such words as are obsolete, antiquated, rare, provincial, local, or disputable, the authorities found in Johnson's Dictionary are retained, and many not found there have been added.

To the words found in Todd's edition of Johnson's Dictionary, nearly 27,000 more have been added, and for all these, authorities are given, except a few, such as the participial adjectives *amusing*, *entertaining*, *established*, &c., for which authorities would be useless. All the verbs of the language that

are often met with, both regular and irregular, are conjugated; and the preterits and perfect participles of the irregular verbs are inserted separately in their alphabetical places; but of the regular verbs, the present and perfect participles ending in *ing* and *ed* are not inserted as separate articles. If this had been done, as it has been in several other dictionaries, it would have added upwards of ten thousand more articles to the vocabulary; which would have considerably increased the size of the volume, without materially increasing its value.

To the words now added to the vocabulary, and not found in Todd's Johnson, an asterisk has been annexed; and it will be seen that, on many of the pages, more than half of the words are of this description. The newly added words have been collected from a great variety of sources. The technical and scientific terms have generally been taken from scientific works, or from dictionaries of the various arts and sciences; as Brande's "Dictionary of Science, Literature, and Art;" Ure's "Dictionary of Arts, Manufactures, and Mines;" Crabb's "Technological Dictionary;" Falconer's "Marine Dictionary;" Dunglison's "Medical Dictionary;" Bouvier's "Law Dictionary;" Loudon's "Encyclopædias;" the "Penny Cyclopædia;" and many other dictionaries of the different arts and sciences, and various encyclopædias, the titles of which are to be found in the Catalogue of works of this kind, in the Introduction of this volume. The greater part of the miscellaneous words have been collected by the Compiler in the course of his reading during many years. A considerable number of words have been taken from several English dictionaries, particularly those of Ash, Richardson, and Smart. With respect to Webster's Dictionary, which the Compiler several years since abridged, he is not aware of having taken a single word, or the definition of a word, from that work, in the preparation of this; but in relation to words of various or disputed pronunciation, Webster's authority is often cited in connection with that of the English orthoëpists. — The Rev. Dr. William Allen, late President of Bowdoin College, having, in the course of his reading, collected several thousand words not found in any dictionary, favored the Compiler with the use of his manuscript, who, on comparing it with his own collection, obtained between fourteen and fifteen hundred additional words, which have been inserted. — The authorities cited for the miscellaneous words are mostly English; and in many instances the names of English authors have been chosen in preference to the names of American authors of equal or even higher respectability; inasmuch as it is satisfactory to many readers to know, in relation to a new, uncommon, or doubtful word, that it is not peculiar to American writers, but that a respectable English authority may be adduced in support of its use.

A dictionary which is designed to be a complete glossary to all English books that are now read, must contain many words which are obsolete, and many which are low or unworthy of being countenanced. Many of the words which have been inserted by the Compiler, and still more of those

which were admitted by Johnson and Todd, no writer of good taste would now be likely to use. The Compiler has not, indeed, inserted all the words which he has found used by respectable writers; yet he apprehends that he shall be more censured for being too liberal, rather than too exclusive, in his views respecting the admission of words into a dictionary. He has deemed it advisable to insert a considerable number of words of very questionable propriety, found in respectable works, with the name of the author as the authority; for it is believed that it will be satisfactory to many readers, when they meet with a rare or disputable word, to be able to turn to a dictionary and see by what other writer it may have been used.

Much care has been taken to note such words as are technical, foreign, obsolete or antiquated, local or provincial, low or exceptionable. The grammatical forms and inflections of words have been given more fully than ever before in any English dictionary; and brief critical notes on the orthography, the pronunciation, the grammatical form and construction, and the peculiar, technical, local, provincial, and American uses of words, are scattered throughout the volume; but among such a multiplicity of matters, it will doubtless be found that many things have been neglected or unsatisfactorily treated. The limits of the work, indeed, are not such as to admit of the discussion of every doubtful point, or of as much verbal criticism as would be necessary to settle the relative merits of every doubtful word. The design has been to give the greatest quantity of useful matter in the most condensed form, and to specify, as far as practicable, authorities in doubtful or disputed cases.

There are many English dictionaries, of various degrees of merit, now in use; and it may be thought not desirable to increase the number. But the Compiler, encouraged by the manner in which his small work had been received, undertook the preparation of this larger one, with the hope that he might be able to give it some peculiar characteristics which would render it not wholly unacceptable or useless to the public. Though not without experience in labor of this sort, he was not, perhaps, when he formed the design, sufficiently impressed with the arduousness of his undertaking or the insufficiency of his qualifications; of both of which he has had abundant and constant occasion to be sensible. No amount of labor or compass of knowledge can render an English dictionary faultless; and this is doubtless susceptible of many and great improvements. Yet, defective as it is, it has cost the Compiler no trifling labor to bring it to its present state, of which some evidence may be apparent to any one who will examine it. He therefore submits it to an impartial public, with no high claims or sanguine expectations, yet with the hope that it will not be adjudged entirely destitute of merit, either in its plan or in its execution.

I.—PRINCIPLES OF PRONUNCIATION.

KEY TO THE SOUNDS OF THE MARKED LETTERS.

VOWELS.

Examples.

1. *i* long. FĀTE, LĀCE, ĀID, FĀIN, FLĀTER.
2. *i* short. FĀT, MĀN, LĀD, CARRY.
3. *a* long before *e*. FĀRE, BĀRE, FĀIR, BEAR.
4. *a* *Indian or gross*. FĀR, FĀTHER, FĀT, ĀRM, CĀLM.
5. *i* intermediate. FĀST, BRĀNCH, GRĀSP, GRĀSS.
6. *a* broad. FĀLL, HĀLL, HĀUL, WĀLK, WĀRM.
7. *a* obscure. LIAR, PALACE, RIVAL, ABBACY.

1. *i* long. MĒTE, SĒAL, FĒAR, KĒEP.
2. *e* short. MĒT, MĒN, SĒLL, FĒRRY.
3. *i* like *a*. HĒIR, THĒRE, WHĒRE.
4. *e* short and obtuse. HĒR, HĒRD, FĒRN, FĒRVĪD.
5. *a* obscure. BRĒR, FUĒL, CELĒRY.

2. *i* long. FĪNE, FĪLE, FĪND, MĪLD, FĪRE.
2. *i* short. FĪN, FĪLL, MĪSS, MĪRROR.
2. *i* like long *e*. MĀCHĪNE, POLĪCE, MĪEN, MĀRINE.
4. *i* short and obtuse. FĪR, SĪR, BĪRD, VĪRTUE.
5. *i* obscure. ELĪXĪR, RUĪN, LOGĪC, ABĪLĪTY.

Examples.

1. *o* long. NŌTE, FŌAL, TŌW, SŌRE.
2. *o* short. NŌT, CŌN, ŌDD, BŌRROW.
3. *o* long and close. MŌVE, PRŌVE, FŌOD, SŌON.
4. *o* broad, like broad *a*. NŌR, FŌRM, SŌRT, ŌUGHT.
5. *o* like short *u*. SŌN, DŌNE, CŌME, MŌNEY.
6. *o* obscure. ACTŌR, CŌNFESS, FELŌNY.

1. *u* long. TŪBE, TŪNE, SŪIT, PŪRE.
2. *u* short. TŪB, TŪN, HŪT, HŪRRY.
3. *u* middle or obtuse. BŪLL, FŪLL, PŪLL, PŪSH.
4. *u* short and obtuse. FŪR, TŪRN, MŪRMUR, HŪRT.
5. *u* like *o* in MŌVE. RŪLE, RŪDE, TRŪE.
6. *u* obscure. SULPHŪR, MŪRMUR, DEPUTY.

1. *y* long. TĪPE, STĪLE, LYRE.
2. *y* short. SĪLVAN, SĪMBOL, CRĪSTAL.
3. *y* short and obtuse. MYRRH, MYRTLE.
4. *y* obscure. TRULY, ENVY, MARTYR.

ŌI and ŌY. BŌIL, TŌIL, NŌY, TŌY.

ŌO and ŌŌ. BŌOND, TŌWN, NŌW.

EŌ like long *u*. FEŌ, NEŌ, DEŌ.

CONSONANTS.

Examples.

1. *c*. . . soft, like *s*. AÇID, FLAÇID.
2. *c*. . . hard, like *k*. FLACID, SCEPTIC.
3. *ch*. . . hard, like *k*. CHARACTER, CHASM.
4. *ch*. . . soft, like *sh*. CHAISE, CHEVALIER.
5. *ch*. . . (unmarked) like *tsh*. CHARM, CHURCH.
6. *g*. . . hard. GET, GIVE, SIFT.
7. *g*. . . soft, like *j*. GENDER, GIANT.
8. *g*. . . soft, like *z*. MUŞ, CHOOŞ.
9. . . . soft or flat, like *gz*. EXAMPLE, EXIST.
10. *th*. . . soft or flat. THIS, VHEE, VHEN.
11. *th*. . . (unmarked,) sharp. THIN, THINK, PITH.
12. *t*. . . like *tsch*. { NATION, NOTION.
13. *t*. . . like *tsch*. { PENSION, MISSION.
14. *ts*. . . like *tsch*. CONFUSION, VIŞION.

- QU . . . (unmarked) like KW. QUEEN, QUESTION.
- WH . . . do. . . like HW. WHEN, WHILE.
- PH . . . do. . . like F. PHANTOM, SERAPH.

REMARKS ON THE KEY.

1. The words which are used in the preceding Key, as examples for illustrating the several sounds, exhibit accurately, when pronounced by correct speakers, the different sounds of the respective letters. Some distinctions are here made which are not found in most other systems of notation; they are, however, not intended to introduce any new sounds, but merely to discriminate such as are now heard from all who speak the language with propriety.

2. When the marks of pronunciation are affixed to words in their proper orthography, in this Dictionary, without respelling them, the vowels which are not marked are silent: thus *a* in *beat*, *hear*; *e* in *able*, *give*, *harden*; *i* in *pain*, *heifer*; *o* in *mason*, *famous*; *u* in *fur-rough*; and *w* in *follow*, are not sounded.

3. The system of notation which is here used, while it makes a very exact discrimination of the different sounds of the letters, will be readily understood and easily applied to practice; and it will also be much more easily remembered, than a system in which the vowels are marked with figures. By applying the marks to the letters of the words in their proper orthography, the necessity of respelling most of them has been avoided; and in this way much space has been saved, while the pronunciation is fixed with as much exactness as if the spelling of every word had been repeated.

4. It is an advantage of this method of notation, that it distinguishes the syllables which receive a secondary accent, or are pronounced with a distinct sound of the vowels, from those which are but slightly or indistinctly sounded. A great part of the words of the English language that have more than two syllables, have more than one syllable in some degree accented, or pronounced more distinctly than the rest; yet this difference in distinctness is not made apparent by the usual modes of marking the words. In this notation, the vowels in the syllables which have either the primary or secondary accent, have a mark placed over them denoting a distinct sound; while those which are more feebly uttered have a dot placed under them. Take, for example, the following words, which are thus noted: *sūn'shine*, *pā'per*, *ān'ec-dōte*, *cār-a-vān'*, *lū'er-ā*, *mān-i-fes-tā'tion*, *in-di-vis-i-bil'i-ty*. In these words, it will be readily perceived, that all the vowels which have a mark placed over them have a distinct sound, or are more or less accented, while those which have a

dot under them are but slightly or indistinctly sounded; and that the pronunciation is as clearly represented to the eye in their proper orthography, as it is, in other methods of notation, by respelling the words.

5. There are many cases in which the vowels are pronounced with so slight a degree of distinctness, that it may be a matter of indifference whether they are marked with the distinct or indistinct sound; as, for example, the last syllable of the words *consonant*, *diffident*, *feebleness*, and *obvious*, might, with nearly equal propriety, have the vowels marked with a short or an indistinct sound.

SOUNDS OF THE VOWELS.

6. The *first*, or *long*, sound of each of the vowels marked thus, *ā*, *ē*, *ī*, *ō*, *ū*, is styled its *alphabetic* or *name* sound, being the sound which is heard in naming the letter. — The sound of the letter *y*, when used as a vowel, is the same as that of *i*; but as a vowel, it begins no properly English word.

7. The long sound of the vowels is generally indicated, in monosyllables, by a silent *e* at the end of the word, preceded by a single consonant, as in *fate*, *mete*, *pine*, *note*, *tube*, *type*. The following words, however, are exceptions; namely, *have*, *are*, and *bade*, the preterit of *to bid*. The vowels have regularly the long sound if final in an accented syllable, as in *ba'sis*, *le'gal*, *tri'al*, *son'o'rous*, *cu'bic*, *ty'rant*.

8. The *second*, or *short*, sound of the vowels is generally indicated, in monosyllables, by the absence of mute *e* at the end of the word, as in *fat*, *met*, *pin*, *not*, *tub*, *hyp*. It is also the usual sound of a vowel in an accented syllable which ends with a consonant, as in *aban'don*, *atten'tive*, *exhib'it*, *lacon'ic*, *reluctant*, *ly'rical*.

9. The *fourth* sound of the vowels, *a*, *e*, *i*, *o*, and *u*, and the third sound of *y*, (called, with respect to *e*, *i*, *u*, and *y*, *short and obtuse*,) marked thus, *ā*, *ē*, *ī*, *ō*, *ū*, *ȳ*, is the *short* sound of these several vowels, when, in a monosyllable or in an accented syllable, they are succeeded by *r* final, or by *r* followed by some other consonant; as, *far*, *hard*; *her*, *herd*; *fir*, *firkin*; *nor*, *north*; *fur*, *burden*; *myrrh*, *myrtle*. Some orthoëpists make no distinction between the sound indicated by this mark and the proper short sound of these vowels; others make a distinction in relation to a part of them only. The vowels having this mark are pronounced with as short a sound as they

readily receive when thus situated. The peculiar character of this sound, which distinguishes it from the proper short sound of the vowels, is caused by the letter *r*; and this letter, thus situated, has an analogous influence on the sound of all the vowels. The difference between the sound of the vowels when thus situated, and their proper short sound, will be readily perceived by the following examples; as, *mān*, *mārrōw*; *mār*, *mār*; — *mēn*, *mērry*; *hēr*, *mērchant*; — *fīn*, *mīrrōr*; *fīr*, *mīrrh*; — *nōt*, *bōrrōw*; *nōr*, *bōrrer*; — *tīn*, *kīrry*; *fūr*, *kūrrle*. There is little or no difference in the sounds of the vowels *e*, *i*, *u*, and *y*, when under this mark; as, *hēr*, *fūr*, *fūr*, *wōrrk*; but their proper short sounds are widely different when followed by *r*, as well as by other consonants, as in *errry*, *mīrror*, *kūrry*. — See remarks on the sound of the letter *R*, page xviii.

10. Vowels marked with the dot or period underneath, thus, *q*, *e*, *i*, *o*, *u*, *y*, are found only in syllables which are not accented, and over which the organs of speech pass slightly and hastily in pronouncing the words in which they are found. This mark is employed rather to indicate a slight stress of voice, than to note any particular quality of sound. If the syllables on which the primary and secondary accents fall, are uttered with a proper stress of voice, these comparatively indistinct syllables will naturally be pronounced right. In a majority of cases, this mark may be regarded as indicating an indistinct short sound of the vowels; as in *tenable*, *mental*, *travel*, *peril*, *idol*, *forum*, *errry*; but in many cases it indicates a slight or unaccented long sound, as in *carbōnate*, *emphāt*, *obey*, *folloquer*, *educate*, *regulate*, *congratulate*. The letter *u*, in the last three words, is pronounced like *y*, slightly articulated. The vowels with this mark have, in some situations, particularly in the last syllable of words ending with *r*, no perceptible difference of sound; as in *frīer*, *speaker*, *nadīr*, *actor*, *sulphūr*, *zephyr*.

A.

11. The third sound of the letter *a*, marked thus, *ā*, is its long sound qualified by being followed by the letter *r*; as in *carē*, *farē*, *parē*. The diphthong *ai*, followed by *r*, has precisely the same sound, as in *fair*, *pair*; so also, in some cases, has the diphthong *ea*, as in *bear*, *pear*. There is obviously a difference in the sound of *e* in these words, as they are pronounced by good speakers, and its sound in *pain* and *fare*. There is the same difference between the sound of *s* in the word *pair*, and its sound in the word

payer, one who pays; also in the word *prayer*, a petition, and in the word *prayer*, one who prays.

12. The fifth sound of *a*, marked thus, *ā*, is an intermediate sound of this letter, between its short sound, as in *fat*, *man*, and its Italian sound, as in *far*, *father*. With respect to the class of words, which, in this Dictionary, have this mark, there is much diversity among orthoëpists. Most of these words, by Nares, Jones, and Perry, are marked with the Italian sound, as in *far* and *father*; but Walker and Jameson mark them, or most of them, with the short sound, as *a* in *fāt*, *mān*; Fulton and Knight mark them as being intermediate between the short and the Italian sound; and Smart, though he gives *a* in most of these words the short mark, says, in relation to it, "There is, in many words, a disposition to broadness in the vowel not quite in unison with the mode of indication, as may be perceived in an unaffected pronunciation of *grass*, *graft*, *command*. This broadness is a decided vulgarity when it identifies the sound with *ā*. The exact sound lies between the one indicated and the vulgar corruption."

E.

13. The letter *e* has, in several words, the same sound as *a* in *fare*; as in *heir*, *there*, *where*; but *were* is properly pronounced *wēr*. In *clerk* and *sergeant*, it has, according to most orthoëpists, the sound of *a* in *dark* and *margia*. — See CLERK and SERGEANT.

14. When *e* precedes *l* or *n* in an unaccented final syllable, in some words it has an indistinct short sound, and in some it is entirely suppressed. It is sounded in *flannel*, *travel*, *vessel*, *chicken*, *sudden*, *woollen*, &c.; and it is suppressed in *drivel*, *grovel*, *hearken*, *heaven*, &c.

15. The letter *e* is generally suppressed in the preterits of verbs, and in participles ending in *ed*, when the *e* is not preceded by *d* or *t*; as, *fear**ed*, *prais**ed*, *adm**ir**ed*, *toss**ed*, *suppress**ed*, pronounced *fear**d*, *prais**d*, *adm**ir**d*, *lost*, *suppres**t*.

I.

16. The long sound of the letter *i* is heard not only in monosyllables ending with a mute *e*, as in *file*, *time*, &c., but also in the word *pint*, and in the words *child*, *mild*, *wild*; also in *bind*, *blind*, *find*, *hind*, *kind*, *mind*, *rind*, &c.

17. There is a class of words, mostly derived from the French and Italian languages, in which *i* retains the sound of long *e*; as, *amberg**is*, *anti**que*, *bombaz**ine*, *braz**il*, *cap**iv**i*, *capuch**in*, *cap**rice*, *chagr**in*, *chevaux-de-frise*, *crit**ique*, *friz**e*, *gabard**ine*, *haberd**ine*, *quarant**ine*, *rav**ine*, *rou**tine*, *fasc**ine*, *fatig**ue*, *intrig**ue*, *inval**id*, *mach**ine*, *magaz**ine*, *mar**ine*, *palanqu**in*, *piqu**e*, *pol**ice*, *recitat**ive*, *mandarin**e*, *labour**ine*, *tambour**ine*, *tont**ine*, *transmar**ine*, *ultramari**ne*, *verdigr**is*. In the word *shire*, *i* commonly has the same sound; and some also give it the same in *oblige* and *oblique*. — See OBLIGE and OBLIQUE.

18. In words which terminate in *ile* and *ine*, with the accent on the penultimate syllable, the *i* in the final syllable is generally short; as, *fert**ile*, *host**ile*, *adamant**ine*, *intest**ine*, &c. The following are exceptions: *ed**ile*, *ex**ile*, *gent**ile*, *pent**ile*, *fel**ine*, *fer**ine*, *conf**ine*, and a few others. Also when the accent is on the antepenult, words ending in *ile* generally have the *i* short; as, *juv**en**ile*, *puer**ile*, &c.; but it is long in *chamo**ile*, *reconc**ile*, *col**ip**ile*, *infant**ile*.

19. With respect to words ending in *ine*, and having the accent on the antepenultimate, there is much uncertainty as to the quantity of *i*; and in relation to a number of such words there is much disagreement among orthoëpists; yet the general rule inclines to the long sound of *i* in the termination of this class of words. In the following words, *i*, in the last syllable, is generally pronounced long: *adulter**ine*, *almad**ine*, *arment**ine*, *ar**im**ine*, *bell**u**ine*, *bizant**ine*, *brigant**ine*, *cannab**ine*, *colubr**ine*, *columb**ine*, *celand**ine*, *concub**ine*, *counterm**ine*, *corall**ine*, *crystall**ine*, *eglant**ine*, *legat**ine*, *leon**ine*, *metall**ine*, *muscad**ine*, *porcup**ine*, *sacchar**ine*, *sapphir**ine*, *saturn**ine*, *serp**ent**ine*, *tur*

*pent**ine*, *ulcer**ine*, *vespert**ine*, *viper**ine*, *vitul**ine*. — In the following words, *i*, in the last syllable, is short: *discipl**ine*, *femin**ine*, *genu**ine*, *hero**ine*, *hyal**ine*, *jessam**ine*, *libert**ine*, *mascul**ine*, *medic**ine*, *nectar**ine*, *palat**ine*. With respect to *alkal**ine*, *aquil**ine*, as well as some others, the orthoëpists, as well as usage, are divided. In the termination *ine* of a class of chemical words, the *i* is short; as, *fluor**ine*, *iod**ine*, *nephel**ine*, &c. In the termination *ile*, the *i* is sometimes short, as in *resp**ile*, *gran**ite*, *favor**ite*, *infin**ite*, &c.; and sometimes long, as in *exped**ile*, *appet**ile*, *satell**ite*, &c. In a class of gentile nouns, and appellatives, formed from proper names, it is long; as, *Hiv**ite*, *Wickl**if**ite*; also, generally, in names of minerals; as, *aug**ite*, *steat**ite*, *tremol**ite*.

20. When *i* ends an initial syllable without the accent, and the succeeding syllable begins with a consonant, the *i* is generally short or indistinct, as if written *e*, as in *civ**ility*, *div**ine*, *fin**ance*; but the exceptions to this rule are numerous, among which are *biquadr**ate*, *chirog**raphy*, *biog**raphy*, *divar**icate*, *librari**an*, *prim**eval*, *tribun**al*, *vital**ity*, and many others, in which the *i* is pronounced long. There is also a considerable number of words with regard to which there is a diversity, in relation to the pronunciation of the *i*, among orthoëpists and in usage; as, *dilat**e*, *diver**ge*, *virag**o*, &c.

O.

21. There is a class of words ending in *f*, *st*, *ss*, *st*, and *th*, in which *o* is marked with the short sound in most pronouncing dictionaries, though some orthoëpists give it the sound of broad *a*, as in *fall*. Mr. Nares gives the sound of broad *a* to *o* in the following words: *off*, *often*, *offer*, *coffee*, *scoff*, *aloft*, *loft*, *soft*, *cross*, *loss*, *lost*, *cost*, *frost*, *lost*, *lost*, *broth*, *cloth*, *froth*, *cough*, and *trough*. To these some others might, with equal propriety, be added; as, *offspring*, *dross*, *gloss*, *moss*, *moth*, *wroth*. Mr. Smart remarks, "that before *ss*, *st*, and *th*, the letter *o* is frequently sounded *du*:- as in *moss*, *gloss*, &c., *lost*, *cost*, &c., *broth*, *cloth*, &c. This practice is analogous to the broad utterance which the letter *a* [short] is liable to receive before certain consonants; [see A, page xi.] and the same remarks will apply in the present case, as to the one referred to, namely, that, though the broad sound is vulgar, there is an affectation in a palpable effort to avoid it in words where its use seems at one time to have been general. In such cases, a medium between the extremes is the practice of the best

speakers." The sound of *o* is also somewhat prolonged in *gone* and *begone*, and in some words ending in *ng*; as, *long*, *prong*, *song*, *strong*, *thong*, *throng*, *wrong*.

22. There are a few words in which *o* has the same sound as *u* in *bull*, or as *oo* in *good*; namely, *bosom*, *wolf*, *woman*, *Wolsey*, *Wolverhampton*. It has the sound of short *u* in *done*, *son*, &c.; and the sound of *ü* (as in *hurt*) in *word*, *work*, *worth*, &c.

23. In many words ending in *on*, the sound of *o* is suppressed, as in *bacon*, *pardon*, *weapon*, *reason*, *cotton*, &c.

U.

24. With respect to the manner of designating the sound of the vowel *u* when it comes immediately after the accent, as in the words *educate*, *astute*, *natural*, &c., there is much diversity among orthoëpists. By Walker, the pronunciation of *EDUCATE* is thus noted — *ed'jü-kät*; by Sheridan, Jones, Enfield, Fulton, and Jameson, thus — *ed'ü-kät*; and by Perry, Knowles, Smart, and Reid, thus — *ed'u-kät*. *NATURE*, by Walker, thus — *nä'chür*; by Sheridan and Jones, thus — *nä'chür*; by Perry, Enfield, and Reid, thus — *nä'tür*; by Jameson and Knowles, thus — *nä'yür*; by Smart, thus — *nä'tür*, or *nä'chür*. *NATURAL*, by Walker and Jones, thus — *nä'chür-räl*; by Sheridan, thus — *nä'chür-äl*; by Fulton, Enfield, and Jameson, thus — *nä'tür-räl*; by Perry and Reid, thus — *nä'u-räl*; by Knowles, thus — *nä'yür-äl*; by Smart, thus — *nä'chür-räl*. There is a pretty large class of words with respect to which there is a similar diversity in the manner in which the pronunciation of *u* and *ü* is noted by the different orthoëpists; but the difference is greater in appearance than in reality. The *u* thus situated may properly be regarded as having the slight sound of long *u*; and the sound may be noted by *yü*, slightly articulated. — Walker remarks, with respect to the pronunciation of *nature*, "There is a vulgar pronunciation of this word as if written *nä'ter*, which cannot be too carefully avoided. Some critics have contended that it ought to be pronounced as if written *nä'yür*; but this pronunciation comes so near to that here adopted [*nä'chür*], as scarcely to be distinguishable from it."

Y.

25. *Y*, at the end of a word, preceded by a consonant, is commonly pronounced short and distinct, like undistinct *e*; as, *policy*, *palpably*,

lately, *colony*, &c. — The exceptions are monosyllables; as, *by*, *cry*, *dry*, *fly*, *fry*, *sty*, *ury*, with their compounds, *awry*, *hereby*, *whereby*, &c.; also verbs ending in *fy*; as, *fortify*, *magnify*, *testify*, &c.; also, *ally*, *occupy*, and *prophecy*.

SOUNDS OF THE DIPHTHONGS AND TRIPHTHONGS.

26. A diphthong is the union of two vowels, pronounced by a single impulse of the voice; as, *oi* in *voice*, *ou* in *sound*.

27. A triphthong is the union of three vowels, pronounced in like manner; as, *ieu* in *adieu*, *iew* in *view*.

28. A proper diphthong is one in which both vowels are sounded; as, *oi* in *voice*, *ou* in *sound*.

PROPER DIPHTHONGS.

ea in *ocean*; *io* in *nation*; *ua* in *assuage*; *eu* "feud"; *oi* "voice"; *ue* "desuetude"; *ew* "jewel"; *ou* "sound"; *ui* "languid"; *ia* "poniard"; *ow* "now"; *ie* "spaniel"; *oy* "boy";

The diphthongs which begin with *e* or *i*, namely, *ea*, *eu*, *ew*, *ia*, *ie*, and *io*, differ from the rest; and they may, as Walker says, "not improperly be called *semi-consonant diphthongs*;" being pronounced as if *y* consonant was substituted in place of *e* or *i*; as, *ocean*, *poniard*, *questyon*.

29. An improper diphthong has only one of the vowels sounded; as, *ea* in *hear*, *oa* in *coal*

IMPROPER DIPHTHONGS.

æ or *ae* in *Cæsar*; *ea* in *beat*; *ie* in *friend*; *ai* . . . "pain"; *ee* "seed"; *oa* "boat"; *ao* . . . "gaol"; *ei* "either"; *æ* "æsofagus"; *au* . . . "haul"; *eo* "people"; *oo* "soon"; *aw* . . . "law"; *ey* "they"; *ow* "crow."

Æ.

30. This is a Latin diphthong, and is always long in Latin. In English, it is used only in words of Latin origin or formation; as, *aquæ vitæ*, *minutiae*, *aesthetics*; and it is sometimes long, as in *pæan*, and sometimes short, as in *Dædalus*.

AI.

31. The usual sound of this diphthong is the same as long *a*; as in *pail*, *pain*, pronounced like *pale*, *pane*. The following are the principal exceptions. It has the sound of short *e* in *said*, *says*, and *smith*, and in *again* and *against*; that

of short *a* in *plaid* and *railery*; that of long *i* in *aisle*; and in a final unaccented syllable, it has the obscure sound of the indistinct short *i*, as in *fountain*, *mountain*, *curtain*.

AO.

32. This diphthong occurs only in the word *gaol*, pronounced, as well as very often written, *jail*.

AU.

33. The common sound of this diphthong is the same as that of broad *a*, or *au*, *caul* and *haul* being pronounced exactly like *call* and *hall*. But when these letters are followed by *n* and another consonant, the sound is changed, in a number of words, to that of the Italian *a* in *far* and *father*; as, by most of the orthoëpists, in the following words: *aunt*, *craunch*, *daunt*, *flaunt*, *gaunt*, *gauntlet*, *haunch*, *haunt*, *jaunt*, *jaundice*, *laundress*, *laundry*, *maund*, *paunch*, *saunter*, *staunch*. Some orthoëpists pronounce a part of these words with the sound of broad *a*, as most of them do the word *vaunt*. In the words *laugh* and *draught*, this diphthong has likewise the sound of *a* in *far*; in *gauge*, the sound of long *a*, (as in *page*;) in *haulboy*, the sound of long *o*; and in *cauliflower*, *laudanum*, and *laurel*, it is commonly pronounced with the sound of short *o*; as, *côl'iflower*, &c.

AW.

34. This diphthong has the sound of broad *a*, *baul* and *ball* being pronounced exactly alike.

AY.

35. This diphthong has the sound of long *a*, as in *pay*, *hay*, &c.; except in *quay*, which is pronounced *ké*; and in *Sunday*, *Monday*, &c., the last syllable is pronounced as if written *Sundy*, *Mondy*.

EA.

36. The regular sound of this diphthong is that of long *e*; as in *beat*, *hear*, pronounced like *beet*, *here*; but there are many words in which it has the sound of short *e*; as, *head*, *dead*, *ready*, &c. In a few words it has the sound of long *a*; as in *break*, *steak*, *great*, *bear*, *bearer*, *forbear*, *for-swear*, *pear*, *swear*, *tear*, *wear*. In some words it has the sound of *a* in *far*; as in *heart*, *hearten*, *heartly*, *hearth*, *hearken*; and, when unaccented, it has only an obscure sound, as in *vengeance*, *sergeant*.

EAU.

37. This triphthong is used only in words derived from the French. In *beauty* it has the

sound of long *u*; but its regular sound is that of long *o*, as in *beau*, *bureau*, *flambeau*, &c.

EE.

38. This diphthong is almost always pronounced like long *e*; the principal exceptions are *been*, (*bin*;) and *breeches*, (*britches*;) The poetical contractions *e'er* and *ne'er*, for *ever* and *never*, are pronounced as if written *air* and *nair*.

EI.

39. This diphthong has most commonly the sound of long *a*, as in *deign*, *eight*, *feign*, *feint*, *freight*, *heinous*, *inveigh*, *neigh*, *neighbor*, *veil*, *weight*, *heir*, *their*, &c. But there are many exceptions. It has the sound of long *e* in *ceil*, *ceiling*, *conceit*, *conceive*, *deceit*, *deceive*, *inveigle*, *perceive*, *receipt*, *receive*, *seize*, *seizin*, *seignior*, *seigniory*, *seine*; commonly also in *either*, *neither*, and *leisure*. (See EITHER, NEITHER, and LEISURE.) It has the sound of long *i* in *height* and *sleight*; of short *e* in *heifer* and *nonpareil*; and, in an unaccented syllable, an indistinct sound of *i*, as in *counterfeit*, *foreign*, *foreigner*, *forfeit*, *forfeiture*, *sovereign*, *sovereignty*, *surfeit*.

EO.

40. This diphthong is pronounced like long *o* in *yeoman*, and like long *e* in *people*; like short *e* in *jeopard*, *jeopardy*, *leopard*, *feoffee*, *feoffer*, *feoffment*; like broad *o* (as in *nor*) in *georgic*; like long *u* in *feod*, *feodal*, *feodary*, (which are written also *feud*, *feudal*, and *feudary*;) and, when unaccented, it has the indistinct sound of *u*, *o*, or *i*, as in *bludgeon*, *curmudgeon*, *dudgeon*, *dungeon*, *gudgeon*, *habergeon*, *luncheon*, *puncheon*, *truncheon*, *surgeon*, *sturgeon*, *scutcheon*, *escutcheon*, *pigeon*, *widgeon*.

EU.

41. This diphthong is always sounded like long *u*, as in *feud*, *deuce*.

EW.

42. This diphthong is almost always sounded like long *u*, or *eu*, as in *few*, *heu*, *new*; but if *r* precedes it, it takes the sound of *oo*, or of *u* in *rule*, as in *brew*, *crew*, *drew*. In the words *show* and *strew*, (written also *show* and *strow*;) this diphthong has the sound of long *o*, as it also has in the verb to *sew*, and commonly also in the word *sewer*, a drain. — See SEWER.

EY.

43. This diphthong has the sound of long

e, as in *bay, dey, grey, hey, prey, they, whey, convey, obey, purvey, survey, eyre, ery.* In *key* and *ley*, it has the sound of long e; and, when unaccented, it has the slight sound of e, as in *galley, valley, &c.*

IA.

44. This diphthong, in the terminations *ial, iam, and iard*, is often united in one syllable, the i being sounded like y; as, *Christian, filial, poniard*, pronounced as if written *Christ'yan, f'yal, pon'yard*. In some words it has the obscure sound of indistinct short i, as in *carriage, marriage, parliament.*

IE.

45. The regular sound of this diphthong is that of long e, as in *chief, fief, fiend, grenadier, grief, grive, lief, liege, thief, &c.* It has the sound of long i in *die, hic, lie, pie, vie, &c.*; and the sound of short e in *friend.*

OA.

46. The regular sound of this diphthong is that of long o, as in *boat, coat, coal, foal, loaf, moat, &c.*; but in *broad, abroad, and groat*, it has the sound of broad a.

OE.

47. This diphthong is derived from the Greek and Latin, and it is retained in but very few words used in English. It is found in *assafœtida*, where it is pronounced like short e, and in *œsophagus, antæci*, also often in *fœtus*, (then written *fetus*), in which it has the sound of long e.

CEU.

48. This triphthong is found only in the word *seigneur*, and it has the sound of oo in *moon*, or of u in *rule*.

OI and OY.

49. The sound of these diphthongs is the same; and it is noted in this Dictionary, as it is in that of Walker and in other Dictionaries, by the sound of broad o, (as in *nor*), and short i. Although this is the manner in which Walker marks these letters in his Dictionary, yet in his "Principles," he says, "The general, and almost universal, sound of this diphthong is that of a vowel the same as o in *nor*) and the first e in *noy*." Perhaps a better mode of representing the sound of this diphthong would be to mark the i and the y with a dot under them, to de-

note the obscure sound, or by the use of an e with the same mark; as, *böyl* or *böçl, böy* or *büç*. Some orthoëpists mark both letters short. There is no disagreement with respect to the sound itself, but merely with regard to the mode of representing it.

OO.

50. The regular sound of this diphthong is heard in *moon, food, stoop*; and it is the same as that of single o in *move, prove.*

51. This diphthong has a shorter sound (the same as the sound of u in *bull*, or of single o in *wolf*) in the following words: *book, brook, cook, crook, foot, good, hood, hook, look, shook, stood, understood, withstood, wood, and wool*; and also, according to some orthoëpists, in *rook* and *soot*. Walker says, that "*foot, good, hood, stood, understood, withstood, wood, and wool*, are the only words where this diphthong has this middle sound." But the rest of the words above enumerated are pronounced with the same sound of this diphthong by other orthoëpists, as well as by common usage. Smart says, that the pronunciation assigned by Walker to *book* (*bök*) "is a decided provincialism."

52. This diphthong has the sound of long o in *door* and *floor*; and of short u in *blood* and *flood*.

OU.

53. This is the most irregular diphthong in the language. Its most common or regular sound is that in which both letters are sounded, as in *bound, sound, cloud, loud, our, shout, south, &c.*

54. This diphthong has the sound of short u in *country, cousin, couple, accouple, double, trouble, southern, courage, encourage, flourish, nourish, nourishment, enough, chough, rough, tough, touch, touchy, young, youngster, &c.* It has the sound of o in *move*, or oo in *moon*, in *accoutre, ag group, group, croup, bouge, amour, paramour, bouse, bousy, capouch, cartouch, rouge, soup, sur-tout, tour, contour, delour, tourney, tournament, through, uncouth, you, your, youth*, and also in various other words derived from the French. It has the sound of long o in *court, account, courtier, course, concourse, recourse, discourse, source, resource, four, fourth, pour, though, although, dough, mould, moult, mourn, shoulder, smoulder, poult, poultice, poultry, soul*. It has the sound of broad a, as in *ball*, or of o, as in *nor*, in *bought, brought, fought, ough, nought, sought, besought, thought, wrought*. It has the sound of u in *bull*, or of oo in *good*, in *could, should, would*. It has the sound of short o, or, accord-

ing to some orthoëpists, of broad *a*, in *cough* and *trough*, rhyming with *off* and *scoff*.

OW.

55. The regular sound of this diphthong, the same as the regular sound of *ou*, is heard in *how*, *now*, *down*, *town*, *tower*, &c. It has the sound of long *o* in *below*, *bestow*, *blow*, *crow*, *flow*, *flown*, *grow*, *grown*, *growth*, *glow*, *know*, *known*, *once*, *own*, *owner*, *show*, *snow*, *sown*, *strow*, *throw*, *thrown*; also in the following words, in some of their senses: *bow*, *low*, *lower*, *mow*, *shower*, *sow*.

56. When this diphthong forms a final or unaccented syllable, it has the slight sound of long *o*, as in *borrow*, *follow*, *follower*.

UA.

57. When both the letters of this diphthong are sounded, they have the power of *ua*, as in *equal*, *language*, *persuade*. In some words the *u* is silent, as in *guard*, *guardian*, *guarantee*, *piquant*; and in *virtuals* and *virtualising*, both the letters are silent.

UE.

58. When these letters are united in a diphthong, and are both sounded, they have the power of *ue*, as in *consuetude*, *desuetude*, *mansuetude*, *conquest*. In some words the *u* is silent, as in *guerdon*, *guess*, *guest*. When this diphthong is final, the *e* is in many words silent, as in *due*, *hue*, *pursue*, *value*, &c.; and in some words both letters are silent, as in *league*, *fatigue*, *harangue*, *tongue*, *antique*, *oblique*, *decalogue*, *demagogue*, *dialogue*, &c.

UI.

59. These letters, when united in a diphthong, and both sounded, have the power of *ui*, as in *anguish*, *languid*, *vanguish*. In some words the *u* is silent, as in *guide*, *guile*, *build*, *guinea*; and in others the *i* is silent, as in *juice*, *pursuit*, *fruit*, &c.

SOUNDS OF THE CONSONANTS.

60. The consonants are divided into *mutes* and *semi-vowels*. The mutes cannot be sounded at all without the aid of a vowel. They are *b*, *d*, *k*, *p*, *t*, and *c* and *g* hard.

61. The semi-vowels have an imperfect sound of themselves. They are *f*, *l*, *m*, *n*, *r*, *s*, *v*, *x*, *z*, and *c* and *g* soft.

62. The four semi-vowels, *l*, *m*, *n*, and *r*, are also called *liquids*, because they readily unite with other consonants, flowing, as it were, into their sounds.

63. The following consonants are styled *dentals*, namely, *d*, *j*, *s*, *t*, *z*, and *g* soft, being pronounced chiefly by the aid of the teeth; *d*, *g*, *j*, *k*, *l*, *n*, and *q*, are called *palatals*, from the use made of the palate in pronouncing them; *b*, *p*, *f*, *v*, and *m*, are called *labials*, being pronounced chiefly by the lips; *m*, *n*, and the digraph *ng*, are called *nasals*, being sounded through the nose; and *k*, *q*, *c* and *g* hard, are called *gutturals*, being sounded by the throat.

B.

64. *B*, preceded by *m* in the same syllable, is generally silent; as, *lamb*, *limb*, *comb*, *dumb*, &c.; but *succumb* is an exception. It is silent also before *t* in the same syllable, as in *debt*, *doubt*, *redoubt*, &c.

C.

65. This letter is hard, and sounds like *k*, before *a*, *o*, and *u*; and it is soft, and sounds like *s*, before *e*, *i*, and *y*; except in *sceptic* and *scirrhus* and their derivatives, in which it is hard, like *k*.

66. When *c* comes after the accent, and is followed by *ea*, *ia*, *io*, or *eous*, it takes, like *s* and *t*, the sound of *sh*; as, *ocean*, *social*, *tenacious*, *ce-taceous*. In the words *discern*, *sacrifice*, *suffice*, and *sice*, and several words derived from *discern*, *sacrifice*, and *suffice*, *c* has the sound of *z*.

CH.

67. The regular English sound of this digraph is the same as that of *tch*, or *tsh*, as in *chair*, *child*, *rich*, *church*. When *ch* follows *l* or *n*, as in *belch*, *bench*, *filch*, Walker, Jameson, and Fulton, designate the sound by *sh*, as *belsh*, *bensh*, *filsh*; but other orthoëpists, Sheridan, Perry, Jones, Knowles, and Smart, give to *ch*, thus situated, the same sound as in *rich*.

68. In words derived from the ancient languages, *ch* is generally hard, like *k*, as in *ache*, *alchemy*, *anarch*, *anarchy*, *anchor*, *anchoret*, *cachery*, *catechism*, *chalcography*, *chalybeate*, *chameleon*, *chamomile*, *chaos*, *character*, *chasm*, *chely*, *chemistry*, *chimera*, *chirography*, *chiromancy*, *choler*, *chorus*, *chord*, *chorography*, *chyle*, *chyme*, *cochleary*, *conch*, *distich*, *echo*, *echinus*, *epoch*, *eunuch*, *hemistich*, *hierarch*, *hierarchy*, *machinal*, *machination*, *mechanic*, *mechanism*, *monarch*, *monarchical*, *orchestra*, *orchestre*, *pentateuch*, *scheme*, *schesis*, *scholar*, *school*, *stomach*, *stomachic*, &c.

The exceptions are *charity*, *chart*, and *charter*. *Ch* is hard in all words in which it is followed by *l* or *r*; as, *chlorosis*, *Christian*.

Q. When *arch*, signifying *chief*, begins a word from the Greek language, and is followed by a vowel, it is pronounced *ark*, as in *archeol*, *architect*, *archive*, *archipelago*, *archetype*, *archiepiscopal*, *archidiaconal*, *architrave*, *archaism*, *archæology*; but when *arch* is prefixed to an English word, it is pronounced so as to rhyme with *marsh*; as, *archbishop*, *archduke*, *arch-fiend*. In *stricken*, *schism*, and *yacht*, *ch* is silent.

D.

70. The termination *ed*, assumed by the present and participle, in some words takes the sound of *d* added to the preceding syllable; as, *healed*, *sealed*, pronounced *heald*, *seald*; and in some it takes the sound of *t*, added in the same manner; as, *distressed*, *mixed*, pronounced *distrest*, *mit*. Some words, which, when used as participles, are pronounced in one syllable, are, when used as adjectives, pronounced in two; as, *learned*, *blessed*, *winged*.

F.

71. This letter has a uniform sound, except in the preposition *of*, in which it has the sound of *v*.

G.

72. *G*, like *c*, has two sounds, one hard and the other soft. It is hard before *a*, *o*, and *u*. The only exception is *guol*, which is commonly written as well as pronounced, *jail*.

73. *G*, before *e*, *i*, and *y*, is sometimes hard and sometimes soft. It is generally soft before words derived from the Greek, Latin, and French, and hard in words from the Saxon; and these last, being such a small number of the words of the language, may be regarded as exceptions.

74. It is hard before *e* in *gear*, *geck*, *geese*, *geld*, *gill*, *gelding*, *gel*, *geugaw*, *shagged*, *ragged*, *cragged*, *ragged*, *scragged*, *dogged*, *ragged*, *dagger*, *lagger*, *swagger*, *trigger*, *dogger*, *gutter*, *tiger*, *anger*, *eager*, *anger*, *finger*, *lagger*, *conger*, *longer*, *stronger*, *younger*, *longest*, *druggal*, *youngest*; before *i*, in *gibber*, *gibberish*, *gibbous*, *gibbal*, *giddy*, *gill*, *gig*, *giggle*, *giggle*, *gill*, *gimlet*, *gimp*, *gird*, *girdle*, *girl*, *girl*, *girth*, *gizzard*, *begin*, *give*, *forgive*, *biggin*, *verry*, *workin*, *druggish*, *vaggish*, *hoggyish*, *swish*, *ragging*, *digging*, &c.; before *y*, in *hurry*, *clergy*, *craggy*, *foggy*, *dreggy*, *very*, *hurry*, *murry*, *quaggy*, *scraggy*, *shaggy*, *murry*, *swaggy*, *luggish*.

(3)

75. The *g* in *longer*, (the comparative of *long*), *stronger*, *younger*, *longest*, *strongest*, and *youngest*, must articulate the *e*; and these words are pronounced as if written with *gg*. Thus *longer*, the comparative of *long*, is pronounced *long'ger*; and *longer*, one who longs, *long'er*.

GH.

76. In this digraph, at the beginning of a word, the *h* is silent, as in *ghost*, *ghastly*, *gherkin*; at the end of words, both letters are commonly silent, as in *high*, *nigh*, *sigh*, *thigh*, *neigh*, *weigh*, *inveigh*, *sleigh*, *bough*, *dough*, *though*, *although*, *plough*, *furlough*, *through*, *thorough*, *borough*. In some words this digraph has the sound of *f*, as in *enough*, *rough*, *tough*, *trough*, *cough*, *chough*, *laugh*, *laughter*; in some, the sound of *k*, as in *hough*, *shough*, *lough*. In *clough* and *slough*, it is sometimes silent, and sometimes has the sound of *f*.

GH.

77. In this termination the letters *gh* are always silent; as, *fight*, *right*, *height*, &c.; except in *draught*, which is pronounced, and in some of its senses usually written, *draft*.

H.

78. This letter is a note of aspiration, and it is silent at the beginning of a number of words; as, *heir*, *heiress*, *honor*, *honesty*, *honorable*, *herb*, *herbage*, *hostler*, *hour*, &c. In *hospital*, *humble*, *humor*, *humorous*, and *humorsome*, according to some orthoëpists it is silent, and according to others it is sounded. It is always silent after *r*, as in *rheum*, *rhetoric*, *rhapsody*, &c.

K.

79. This letter has the same sound as *c* hard, and is always silent before *n*, as in *knee*, *kneel*, *know*, &c.

L.

80. *L* is silent in many words; as in *calf*, *half*, *chalk*, *talk*, *balm*, *calm*, *would*, *could*, *should*, &c.

M.

81. *M* always preserves its sound, except in *account*, *accountant*, and *comptroller*; more commonly written *account*, *accountant*, and *controller*.

N.

82. *N* has two sounds, one simple and pure, as in *man*, *not*; the other compound and mixed, as in *hang*, *thank*, *banquet*, *anxious*; the three

(B*)

last being pronounced as if written *thangk*, *bang'quet*, *angk'shus*.

83. *N* is mute when it ends a syllable and is preceded by *l* or *m*, as in *kiln*, *hymn*, *limn*, *column*, *autumn*, *solemn*, *condemn*, *contemn*, &c.

P.

84. *P* is silent before *s* and *t* at the beginning of words, as in *psalm*, *psalter*, *ptisan*.

PH.

85. This digraph generally has the sound of *f*, as in *physic*, *philosophy*, &c. In *nephew* and *Stephen*, it has the sound of *v*; and in *diphthong*, *triphthong*, *naphtha*, &c., the *h* is silent.

Q.

86. *Q* is always followed by *u*, and the digraph *qu* has commonly the sound of *kw*, as in *queen*, *quill*, *quart*; but, in many words derived from the French, it has the sound of *k*, as in *coquet*, *eliquette*, *masquerade*, &c.

R.

87. The letter *r* has a jarring or trilling effect on the tongue, and it is never silent. It has a peculiar influence on both the long and the short sound of the vowels. It has the effect, under certain circumstances, to change the short sound of *a*, as in *man*, into its Italian sound, as in *far*, and the short sound of *o*, as in *not*, into its broad sound, like broad *a*, as in *nor*; and it has a corresponding effect on the short sound of the other vowels.—(See pages x and xi).—When *r* is preceded by a long vowel, it has sometimes the effect of confounding the syllables. Thus the monosyllables *hire*, *more*, *roar*, *sore*, and *flour*, are pronounced precisely like the dissyllables *higher*, *mover*, *rouer*, *souer*, and *flover*.

88. There is a difference of opinion among orthoëpists respecting the letter *r*. Johnson says, that "it has one constant sound in English;" and the same view of it is maintained by Kenrick, Sheridan, Perry, Jones, Jameson, and Knowles. Walker, on the contrary, says, "There is a distinction in the sound of this letter scarcely ever noticed by any of our writers on the subject, which is, in my opinion, of no small importance; and that is, the rough and the smooth *r*." The following is the view given by Smart: "*R* is a decided consonant when it begins a syllable with or without another consonant, as in *ray*, *pray*; and also when it ends a syllable, if it should be so circumstanced that, ending one, it also begins the

next, as in *arid*, *tarry*, *peril*, *berry*, *spirit*, *florid*, *hurry*. Here the *r* has the same effect on the previous vowel that any other consonant would have; that is to say, it stops, or renders the vowel essentially short. But, under other circumstances, final *r* is not a decided consonant; and therefore the syllables *ar*, *er*, *ir*, *or*, *ur*, are not coincident, as to the vowel sound in each, with *at*, *et*, *it*, *ot*, *ut*; neither do the vowel sounds in *fare*, *mere*, *ire*, *ore*, *ure*, *poor*, *our*, quite identify with those in *fate*, *mete*, *ide*, *ode*, *cube*, *pool*, *oud*."

S.

89. The regular or genuine sound of *s* is its sharp, sibilant, or hissing sound, like *c* soft, as in *son*, *this*. It has also a flat or soft sound, (called by some its vocal sound,) the same as that of the letter *z*, as in *wise*, *his*.

90. *S* has always its sharp, hissing sound at the beginning of words, as *son*, *safe*; also at the end of words when they terminate in *as*, except the words *as*, *has*, *was*, *whereas*, and the plural of nouns ending *ea*, as *seas*, *pleas*; in all words ending in *ss*, as *less*, *express*; in all words ending in *is*, except the monosyllables *is* and *his*; in all words ending in *us* and *ous*, as *genius*, *famous*; in all words when preceded, in the same syllable, by either of the mutes *k*, *p*, *t*, or by *f*, as *locks*, *hats*, *caps*, *muffs*.

91. *S* final has the sound of *z* when it immediately follows any consonant, except the mutes *k*, *p*, *t*, the semi-vowel *f*, and *th* aspirated, as in *ribs*, *heads*, *hens*; also when it forms an additional syllable with *e* before it, in the plural of nouns and the third person singular of verbs, as in *churches*, *boxes*, *prices*; likewise in some verbs ending in *se*, to distinguish them from nouns and adjectives of the same form, as *abuse*, *use*, *close*, *diffuse*, as distinguished from the nouns and adjectives *abuse*, *use*, *close*, *diffuse*. But it is impossible to give rules which will enable one to see, in all cases, how *s* is to be pronounced, whether with its sharp, hissing sound, or its flat or soft sound, like *z*.

92. *S* aspirated, or sounding like *sh* or *zh*.—*S* takes the sound of *sh* in words ending in *sion*, preceded by a consonant, as in *diversion*, *expulsion*, *dimension*, *passion*, *mission*, &c.; also in the following words: *censure*, *tensure*, *tonsure*, *sensual*, *fissure*, *scissure*, *pressure*, *compressure*, *impressure*, *sure*, *assure*, *insure*, *nauseate*, *nauseous*, *crosseous*, *sugar*, *sumach*.

93. *S* has the sound of *zh* in the termination *sion*, preceded by a vowel, as in *evasion*, *cohe-*

sion, d-cision, explosion, contusion, &c.; also in a number of words in which *s* is preceded by an accented vowel, and followed by the termination *ure*, as in *measure, pleasure, displeasure, treasure, rasure, closure, disclosure, enclosure, exposure, composure, incisure, leisure*; also in several words ending in *sier*; as, *crossier, cosier, snier, hosier, rosier, brasier, grasier*; also in *ambrosia, ambrosial, elysium, elysian*.

T.

94. *T*, like *s* and *c*, is aspirated when it comes immediately after the accent, and is followed by the vowels *ia*, *ie*, or *io*, taking the sound, in these cases, of *sh*, as in *partial, patient, nation, partition, &c.*

TH.

95. This digraph has two sounds; one, hard, sharp, or aspirate, as in *thin, think, earth, breath, &c.*; the other, flat, soft, or vocal, as in *this, the, then, breathe, &c.*

96. At the beginning of words, this digraph is generally sharp, as in *thin, thorn*. The exceptions are the following words, with their soft sounds; *the, this, that, thou, thee, thy, thine, their, theirs, them, these, those, there, therefore, then, thence, thither, though, thus*. At the end of words it is generally sharp, as in *death, breath, &c.*; but at the end of some verbs it is flat, as to *smooth, to mouth*; also in the following, which are written with a final *e*: to *bathe, to lequathe, to breathe, to clothe, to loathe, to shake, to soothe, to swathe, to ureathe*.

97. In some nouns, it is sharp in the singular, as in *bath, path*; and flat in the plural, as *baths, paths*. In some words the *h* is silent, as in *Rome, thyme*.

W.

98. *W*, at the beginning of words, is a consonant. It is always silent before *r*; as, *write, even, wrist, &c.*

WH.

99. This digraph is sounded as it would naturally be if the order of the letters were reversed, *wh*, *hw*: as, *when, while, whip*, pronounced *hwen, hwile, hwip*. In some words the *w* is silent; as, *who, whole, &c.*

X.

100. The regular sound of *x* is its sharp sound, like *ks*; as, *excellence, execute, expect, tax*.

101. It has a flat or soft sound, like *gz*, when the syllable following begins with an accented vowel, as in *exalt, example, exert, execu-*

tor; also in some words derived from primitives which have the sound of *gz* in them; as, *exaltation, exemplary*.

102. At the beginning of words, it has the sound of *z*, as in *Xenophon, xylography*.

103. *X* is aspirated, and takes the sound of *ksh*, in some words, when the accent immediately precedes it; as, *fluxion, complexion, anxious, luxury*.

Z.

104. This letter has the same sound as flat or soft *s*. It is aspirated, taking the sound of *zh*, in a few words; as, *brazier, glazier, grazier, vizier, azure, rasure, seizure*.

ACCENT.

105. All the words in the English language of more than one syllable, have one accented syllable; and most polysyllabic words have not only a syllable with the primary accent, but also one with a secondary accent.

106. It is the general tendency of the language to place the accent on the first syllable of dissyllables, and on the antepenultimate of polysyllables. The exceptions, however, are so numerous, that this is not to be regarded as a rule, but only as a general tendency of the language. With respect to verbs of two syllables, the tendency is to place the accent on the second syllable.

107. A large part of the words of the English language, especially of the polysyllables, are derived from the Latin and Greek languages; and, with respect to the accent of such words, these languages have great influence; though, in relation to many of them, the analogy of the English prevails over that of the original language.

108. Words which are adopted from the Latin language into the English without any change of orthography, generally retain the Latin accent, especially if they are terms of the arts and sciences, or words somewhat removed from common usage. The following words have the accent on the penultimate syllable, both in Latin and English: *abdomen, acumen, asylum, bilumen, curator, decorum, delator, dictator, horizon, spectator, testator*.

109. Some words which have the accent on the penult in Latin, are conformed to the English analogy, and have the accent on the antepenult; as, *auditor, character, cicatrix, orator, minister, plethora, senator, sinister*.

110. Monosyllables are generally marked, in

pronouncing dictionaries, with the distinct sounds of the vowels, as they are pronounced when uttered distinctly; but, in reading and speaking, a great part of them, especially the particles, as *a, an, the, and, at, of, in, on, &c.*, are generally uttered so as to give only an indistinct or obscure sound to the vowels.

111. Simple words of two syllables have only one syllable accented, except the word *amen*, which, Walker says, "is the only word in the language which has necessarily two consecutive accents." There are, however, many compound words of two syllables which have both syllables more or less accented; as, *backslide, downfall, highway, lighthouse, sometimes, way-lay, windmill, &c.*

112. Many words of three and four syllables have only one accented syllable; as, *sensible, penalty, reliance, occurrence, republic, admirable, agreeable, celebrity, congenial, chalybeate, &c.* But some have a secondary accent almost as strong as the primary; as, *advertise, artisan, partisan, complaisant, caravan, countermand, reprimand, contraband, commodore, reprehend, navigator, regulator, detrimental, judicature, caricature, animadvert, &c.*

113. Almost all words of more than four syllables have both a primary and a secondary accent; and some words of seven or eight syllables have one primary and two secondary accents; as, *indivisibility, incomprehensibility.*

114. The following list of dissyllables, when used as nouns or adjectives, have the accent on the first syllable; and when used as verbs, on the second:—

<i>Nouns or Adjectives.</i>	<i>Verbs.</i>	<i>Nouns or Adjectives.</i>	<i>Verbs.</i>
Ab'ject	abject'	Con'serve	conserve'

Pres'age	presage'	Up'start	upstart'

115. Of the words in the above table, *cement, complot, essay, increase, perfume, permit, survey, and undress*, when used as nouns, are often pronounced with the accent on the second syllable.—See these words in the Dictionary.—See also the words **CONTENTS, DETAIL, and RETAIL**, which are more or less conformed to this analogy, with respect to the accent.

116. The following trisyllables, when nouns, are accented on the first syllable; and when verbs, on the third:—

<i>Nouns.</i>	<i>Verbs.</i>
Coun'tercharge	countercharge'
Coun'tercharm	countercharm'
Coun'tercheck	countercheck'
Coun'termand	countermand'
Coun'termarch	countermarch'
Coun'terminate	counterminate'
Coun'terpoise	counterpoise'
Coun'tersign	countersign'
In'terchange	interchange'
In'terdict	interdict'
O'vercharge	overcharge'
O'verflow	overflow'
O'vermatch	overmatch'
O'verthrow	overthrow'
Re'primand	reprimand'

117. A similar analogy has influence in changing the accent of many other words, which are used as verbs, and also as nouns or adjectives. Thus, *counterbalance* and *orbalance*, when nouns, have the accent on the first syllable, and when verbs, on the third; and *attribute*, as a noun, is accented on the first syllable, and as a verb, on the second. A class of words with the termination *ate*, have the distinct sound of long *a*, when used as verbs, and

the indistinct or obscure sound of *a*, when used as nouns or adjectives; of this class are *deliberate*, *intimate*, *mediate*, *moderate*, &c. The word *island*, when used as a verb, is pronounced with a more distinct sound of short *e*, in the last syllable, than when used as a noun. The verb to *prophesy* has the full sound of long *y*; and the noun *prophecy*, the obscure sound of *y* or *e*. So the whole class of verbs ending in *fy* are pronounced with the distinct sound of long *y*.

118. There is a difference in the pronunciation of the following words, when used as nouns or adjectives, and when used as verbs. This difference is somewhat analogous to the change of accent in the preceding lists of words.

Nouns.	Verbs.	Nouns.	Verbs.
Abuse	abuse	Grease	grease
Advice	advise	House	house
Cloze	clope	Mouse	mouge
Device	devise	Prophecy	prophesey
Diffuse	diffuse	Rise	rise
Excuse	excuse	Use	use

119. All words ending in *sion* and *tion* have the accent on the penultimate syllable; as, *dis-sion*, *declara-tion*, *medita-tion*, &c.

120. Words ending in *ia*, *iac*, *ial*, *ian*, *ious*, and *ious*, have the accent on the preceding syllable; as, *regalia*, *demoniac*, *imperial*, *meridian*, *spontaneous*, *melo-dious*. If *c*, *g*, *s*, *l*, or *z*, precede the vowels *e* or *i*, in these terminations, these vowels are generally blended with the vowel or vowels which follow, being pronounced as one syllable; as, *beneficial*, *magician*, *furious*, *loquacious*, *dissensions*, *courageous*, *controversious*, *contentious*. The only exception to this rule, in relation to placing the accent, is the word *elegiac*, which is commonly pronounced *elég-iac*, though some pronounce it, in accordance with the rule, *elég-iac*. — See ELEGIAC.

121. Words ending in *acal* and *ical* have the accent on the antepenultimate syllable; as, *heli-ocentrical*, *alphabetical*, *sanatival*, *geographical*, *poetical*, &c. In words of this termination, the vowels of the accented syllables, if followed by a consonant, are short, except *u*, which is long; as, *cardinal*, *medical*, *scorbittical*.

122. Words ending in *ic* have the accent on the antepenultimate syllable; as, *algebraic*, *metall-ic*, *num-er-ic*, *scientif-ic*, *harmon-ic*, *paralyt-ic*. If a vowel immediately precedes the *i*, the vowels in the accented syllable are short, except the vowel *u*, which is long if it is followed by a single consonant; as, *cherub-ic*, *scorbitt-ic*, *myth-ic*, *tellur-ic*, &c.; but if *u* is followed by

two consonants, it is sometimes short; as, *fus-tic*, *rust-ic*; and sometimes long; as, *rubric*, *lubric*. The following words, which are exceptions to this rule, have the accent on the antepenultimate syllable: *arsenic*, (as a noun,) *arith-metic*, *bishopric*, *catholic*, *chol-eric*, *ephem-eric*, *her-etic*, *lu-natic*, *poli-tic*, *rhet-oric*, and *tur-meric*. The following words, according to some orthoëpists, are conformed to the rule, and according to others, they are exceptions to it: *climacteric*, *em-piric*, *phlegmatic*, *splenetic*. — See these words in the Dictionary.

123. Words of three or more syllables, ending in *cal*, have their accent on the antepenultimate syllable; as, *bo-real*; *corpo-real*, *incorpo-real*, *cu-neal*, *em-py-real*, *eth-ereal*, *fun-ereal*, *homoge-neal*, *heteroge-neal*, *lac-teal*, *lin-eal*, *or-deal*, *subter-ra-neal*; except *hymen-eal*, which has the penultimate accent.

124. Of words ending in *ean*, the following, being conformed to the English analogy, have the accent on the antepenultimate syllable: *ce-rulean*, *hyperbo-rean*, *hercu-lean*, *mediterra-nean*, *subterra-nean*, *tarta-rean*; but the following are pronounced by the principal orthoëpists, in accordance with the best usage, with the accent on the penultimate: *adamante-an*, *Atlante-an*, *colosse-an*, *empyre-an*, *epicure-an*, *Europe-an*, *hymene-an*, *pygme-an*. With regard to *European*, Walker remarks as follows: "This word, according to the analogy of our own language, ought certainly to have the accent on the second syllable; and this is the pronunciation which unlettered speakers constantly adopt; but the learned, ashamed of the analogies of their own tongue, always place the accent on the third syllable, because *Europæus* has the penultimate long, and is therefore accented in Latin. *Epicurean* has the accent on the same syllable, by the same rule; while *herculean* and *cerulean* submit to English analogy, and have their accent on the second syllable, because their penultimate in Latin is short."

125. Words ending in *tude*, *efy*, *ify*, and *ity*, have their accent on the antepenultimate; as, *forti-tude*, *rarefy*, *diver-sify*, *liberal-ity*, *impur-ity*, *vari-ety*, *insensibil-ity*.

126. Words of three or more syllables ending in *ulous*, *inous*, *crous*, and *orous*, have the accent on the antepenultimate; as, *sed-ulous*, *volu-minous*, *rocif-erous*, *carniv-orous*; except *cano-rous* and *sono-rous*, which have the accent on the penultimate.

127. Words of three or more syllables ending in *ative* have the accent on the antepenultimate,

or on the preceding syllable; as, *rel'ative*, *appel'lative*, *commu'nica'tive*, *spec'ulative*. The only exception is *crea'tive*.

128. Words ending in *tive*, preceded by a consonant, have the accent on the penultimate; as, *attra'ctive*, *invec'tive*, *presump'tive*; except *ad'jective* and *sub'stantive*.

ORTHOËPY AND ORTHOËPISTS.

129. The pronunciation of the English language, like that of all living languages, is in a great measure arbitrary. It is exposed to the caprices of fashion and taste. It is liable to change from one age to another; and it varies, more or less, not only in the different and distantly separated countries in which it is spoken, but also in the different divisions and districts of the same country. No two speakers or orthoëpists, though inhabitants of the same place, would be likely to agree in the pronunciation of all its words. The standard of pronunciation is not the authority of any dictionary, or of any orthoëpist; but it is the present usage of literary and well-bred society.

130. The question may be asked, Where is this standard to be sought, — this usage to be ascertained? To this it may be answered, that London is the great metropolis of English literature; and that it has an incomparably greater influence than any other city in giving law, in relation to style and pronunciation, to the many millions who write and speak the language. The English orthoëpists naturally refer to the usage of the best society in London as their principal standard; but the usage of good society in that city is not uniform, and no two orthoëpists would perfectly agree with each other in attempting to exhibit it.

131. It may be further asked, How far is it proper for the people of the United States to be guided, in their pronunciation, by the usage of London? To this it may be answered, that it is advisable for American writers and speakers to conform substantially to the best models, wherever they may be found; and so long as London holds its rank as the great metropolis of the literature of the English language, so long it must have a predominating influence with respect to writing and speaking it. If the influence of the usage of London were discarded, where should we seek for a usage that would be generally acknowledged as entitled to higher authority?

There is no one city in the United States which holds a corresponding rank, as a centre of intelligence and fashion, — no one which is the central and undisputed metropolis of Anglo-American literature, as London is of English literature. The pronunciation in the United States is, indeed, now substantially conformed to the usage of London. The works of the English orthoëpists, who have regarded the usage of London as their standard, have been as generally circulated and used in this country, as they have been in England; and there is, undoubtedly, a more general conformity to London usage in pronunciation throughout the United States, than there is throughout Great Britain.

132. Although it is not to be questioned, that, with respect to the many millions who speak the English language, the usage of London is entitled to far more weight than that of any other city, yet this is not the only thing to be observed. The usage of the best society in the place or district in which one resides, is not to be disregarded. If our pronunciation is agreeable to the analogy of the language, and conformed to the practice of the best society with which we have intercourse, we may have no sufficient reason to change it, though it should deviate, more or less, from the existing usage of London. A proper pronunciation is, indeed, a desirable accomplishment, and is indicative of a correct taste and a good education; still it ought to be remembered, that, in speech as in manners, he who is the most precise is often the least pleasing, and that rusticity is more excusable than affectation.

133. "For pronunciation," says Dr. Johnson, "the best general rule is to consider those as the most elegant speakers who deviate least from the written words." There are many words of which the pronunciation in England is, at present, better conformed to the spelling than it was formerly; and the principle of conformity between the manner of writing and speaking the language, has been carried somewhat farther in the United States than in England. This is a principle which seems worthy of being encouraged, rather than checked.

134. Much ingenuity and labor have been employed by various orthoëpists, in their efforts to settle the pronunciation of the language; and different systems of notation for designating the sounds of the letters have been adopted. But it has been found difficult to form such a system as will correctly represent all the various sounds of the letters, and not be liable to mislead; and,

if such a system were formed, it would be a difficult and delicate matter to make a correct application of it to all cases. The language, as it respects pronunciation, has many irregularities, which cannot be subjected to any general rules; and with regard to the pronunciation of particular words, the instances are numerous in relation to which there is a disagreement among the best orthoëpists.

135. In the preparation of this work, Pronunciation has been made a special object, and has received particular attention. A prominent feature in the plan consists in the exhibition of authorities respecting words of various, doubtful, or disputed pronunciation; and this work is so constructed as to exhibit, with respect to all this class of words, for which a pronouncing dictionary is chiefly wanted, the modes in which they are pronounced by all the most eminent English orthoëpists. The number of primitive words respecting which the authorities are presented, amounts to upwards of two thousand: and, in addition to these, this process also

determines the pronunciation of a large number of derivatives. As the pronunciation of these words is regulated by usage, and as there is a great diversity, with regard to them, both among good speakers and professed orthoëpists, the exhibition of the different authorities seems to be the most satisfactory method of treating them.

136. The following *Table* exhibits the manner in which the pronunciation of a number of words is represented by Sheridan, Walker, Jones, Jameson, Knowles, and Smart, together with the mode adopted in this work. These several orthoëpists have each his own peculiar system of notation; but as their different methods of marking the letters cannot be here exhibited without much inconvenience, and without causing great confusion to the reader, their respective modes, with regard to the respelling of the words, are presented; and instead of their marks on the vowels, those employed in this work are substituted, indicating, in all cases, the same sounds of the letters.

[illegible]

137. In relation to all the words here exhibited, these orthoëpists agree with respect to two of the most important points in the pronunciation of words, namely, the syllable on which the accent is to be placed, and the quantity of the vowel in the accented syllable. Though with regard to the mode of representing the pronunciation of most of the above words, there is considerable diversity, yet it is doubtless true that the pronunciation intended to be expressed differs, in reality, much less than it would seem to do; and that, in numerous instances, these ~~reports~~ agreed much better in their practice, than in their mode of indicating it.

11. There is an obvious difference in the quantity and stress of voice with which the last *s* of the words *deliberate*, *intimate*, and

moderate, are pronounced, when verbs and when adjectives. All the above orthoëpists mark the *a* long in the last syllable of all these words when used as verbs; Jameson and Smart also mark it long in all of them when adjectives; Walker shortens the *a* in the adjectives *intimate* and *moderate*; Sheridan and Jones change the *a* in all these words, when adjectives, into short *e*, as Knowles also does in the words *intimate* and *moderate*. But there seems to be no advantage in changing the letter in such cases. It is but slightly pronounced, and has not the distinct sound of either short *e*, or short or long *a*; and, with respect to most of the instances in which the vowels in this Dictionary have a dot placed under them, they are so slightly pronounced, that to mark them with a distinct sound, either long

or short, would tend rather to mislead, than to assist in pronouncing them. If the syllables on which the primary and secondary accents fall, are correctly pronounced, the comparatively indistinct syllables will naturally be pronounced right.

139. In giving the authorities for pronunciation in this Dictionary, neither the respelling nor the notation of the orthoëpists cited has been generally exhibited, as it was necessary to reduce them all to one system. Their precise difference is not always presented with exactness; yet the cases of failure are not important. The different editions of the authors used as authorities differ in various instances; and it is sometimes impossible to ascertain whether the intention of the writer has not been frustrated by an error of the press.

140. Two modes of pronouncing a word are, in many instances, given in this work, besides the forms included within the brackets; and alternatives of this sort would have been presented in other cases, if different modes had not been cited from respectable authorities. The reader will feel perfectly authorized to adopt such a form as he may choose, whether it is exhibited within the brackets or out of them; and every one will probably, in some cases, prefer a mode found only within the brackets. The compiler has not intended, in any case, to give his own sanction to a form which is not supported either by usage, authority, or analogy. He has, however, in some instances, in deference to the weight of authorities, given the preference to a mode, which, in the exercise of his own judgment, independent of the authorities, he would not have preferred; for it would be unreasonable for him to make a conformity to his own taste, or to the result of his own limited observation, a law to those who may differ from him, and yet agree with perhaps the more common usage. But,

though it has not been his design to make innovations, or to encourage provincial or American peculiarities, yet he has not always given the preference to the mode of pronunciation which is supported by the greatest weight of the authorities cited; and, where orthoëpists are divided, he has generally been inclined to countenance that mode which is most conformable to analogy or to orthography.

141. The English authorities most frequently cited in this volume are Sheridan, Walker, Perry, Jones, Enfield, Fulton and Knight, Jameson, Knowles, Smart, and Reid, all of whom are authors of Pronouncing Dictionaries. In addition to these, various other English lexicographers and orthoëpists are frequently brought forward, as Bailey, Johnson, Kenrick, Ash, Dyche, Barclay, Entick, Scott, Nares, Rees, Maunder, Crabb, and several others; besides the distinguished American lexicographer, Dr. Webster.

142. The different English orthoëpists, who are made use of as authorities, are entitled to very different degrees of respect. There is no one of them who has obtained a higher and more widely-extended reputation than Walker; and no one appears to have bestowed longer and more patient attention in studying the analogies of the language, and in ascertaining the best usage. But there has been considerable change since his time; and some, who have succeeded him, have corrected some of his mistakes, and made improvements on his system; and they may, in many cases, be considered better guides as to the present usage than Walker.

143. Of the successors of Walker, Mr. Smart appears to have given the most careful and discriminating attention to the subject; and he may therefore be regarded as the best single authority for present usage.—For further notices of English orthoëpists, see page lxxv.

II.—ORTHOGRAPHY.

REMARKS ON ORTHOGRAPHY.

1. THE orthography of the English language has been undergoing continual changes from the time of its first formation to the present day; nor is there any reason to suppose that this habit of change will cease, while the language continues to be spoken. If we look into books printed in the reign of Queen Anne, we meet with many words having an orthography different from that in which they are now found. If we carry our observation back as far as the reign of Queen Elizabeth, we find the difference in orthography greatly increased; and when, in our retrospective examination, we reach the age of Chaucer and Wicliffe, we find many words, which, though they are words now actually in use, are so disguised in their orthographical form, and are of so odd and uncouth an appearance, that they can hardly be recognized.

2. The early productions of English literature which are still much read, such as the works of Bacon, Hooker, Shakspeare, and the common version of the Bible, appear now in an orthography very different from that in which they were at first printed. The first four verses of the 32d chapter of Deuteronomy, in the first edition of the common version of the Bible, printed in 1611, stand thus: "Giue eare, O yee heauens, &c. I will speake; And heare, O earth, the word of my mouth. My doctrine shall drop as the raine: my speech shall distill as the dew, as the snowe vpon the tender herbe, and as the shewres vpon the grasse. Because I will publish the Name of the Lord; ascribe ye greatnesse vnto our God. He is the rocke, his worke is perfect: for all his wayes are iust: A God of trueth, and without iniury, and right is he." In these few lines, which may be taken as a specimen of the whole, there are twenty-seven instances in which the words appear in an orthography different from that in which they are now printed. It is not uncommon to find the same word spelled in more ways than one on the same page, as is generally the case with works even of the

most distinguished writers, printed in the early ages of English literature.

3. It is incumbent on a lexicographer, in adjusting the orthography of the language, to have regard to etymology, analogy, and the best usage of his time; and if we examine the early English dictionaries, we shall find that the orthography is conformed to the general usage of the age in which they were published. This unsettled state of orthography has long been regarded as a reproach to the language. It is an evil, however, which is unavoidable, and to which all living languages are more or less subject. It has arisen from the want of some fixed standard, not varying like usage; but such a standard it is in vain to seek. Some ingenious men have attempted to introduce a uniformity, and establish an invariable standard; but these attempts have been attended with little success.

4. Johnson says, in his Preface, "In adjusting the *orthography*, which has been to this time unsettled and fortuitous, I found it necessary to distinguish those irregularities that are inherent in our tongue, and perhaps coëval with it, from others which the ignorance or negligence of later writers has produced. Every language has its anomalies, which, though inconvenient, and in themselves once unnecessary, must be tolerated among the imperfections of human things, and which require only to be registered, that they may not be increased, and ascertained, that they may not be confounded: but every language has likewise its improprieties and absurdities, which it is the duty of the lexicographer to correct and proscribe."

5. The Dictionary of Johnson was first published in 1755; and with reference to it, Mr. Nares, in his "*Elements of Orthoëpy*," published in 1784, remarks, "The English Dictionary appeared; and, as the weight of truth and reason is irresistible, its authority has nearly fixed the external form of our language; and from its decisions few appeals have yet been made." It may be readily admitted that no other work ever

had so great an influence on the English language as this; yet it is not possible that the work of any man, or of any body of men, should so fix the external form of the language, as to put a stop to further alterations. Johnson justly says, "No dictionary of a living language ever can be perfect, since, while it is hastening to publication, some words are budding, and some are falling away." And he also remarks, "The orthography which I recommend is still controvertible." It is undoubtedly true that there never was before, during any century since the first formation of the English language, so great an influx of new words into it, as there has been since the first appearance of Johnson's Dictionary. Various other changes have taken place. Some words, then obsolete, have been revived; some, then in use, have fallen away; to some new significations have been attached; and many have changed their orthography.

6. In adjusting the orthography of this Dictionary, much care has been taken; in doing it, attention has been paid to etymology, analogy, and usage; and in cases in which good usage is divided, etymology and analogy have been consulted in deciding disputable points. But no innovation has been made with respect to invariable and settled usage.

7. Two of the most noted diversities, with regard to orthography, are found in the two classes of words ending in *ic* or *ick*, and in *or* or *our*; as, *music*, *public*, or *musick*, *publick*; *favor*, *honor*, or *favours*, *honours*. Johnson, in accordance with the general, though not invariable usage of his age, wrote these words with the *k* and *u*.

8. The use of the *k*, in this class of words, was laid aside by many writers before the time of Johnson; and it is omitted in Martin's Dictionary, the first edition of which was published in 1749. Martin says, in his Preface, "In this respect [orthography] our dictionaries most certainly want a reformation; for they all retain the old way of writing technical words with the redundant final *k* after *c*; as, *logick*, *rhetorick*, *musick*, &c., which later writers have justly discarded, and more neatly write *logic*, *rhetoric*, *music*, &c.; and accordingly they here stand in that form through this Dictionary."

9. In the class of words referred to, the *k* is still retained in the recent editions of Johnson's Dictionary; also in the dictionaries of Sheridan, Walker, Jameson, and Richardson; but in most of the other English dictionaries which have been published since that of Johnson, it is omit-

ted; and Walker, although he retains it in his Dictionary, condemns the use of it, and observes, that "the omission of it is too general to be counteracted even by the authority of Johnson." The general usage is now so strongly in favor of its omission, that it is high time that it should be excluded from the dictionaries. It is, however, retained in monosyllables; as, *stick*, *brick*, *lock*; and in some dissyllables ending in *ock*; as, *hillock*, *hemlock*, &c. The verbs *to frolic*, *to mimic*, *to physic*, and *to traffic*, are written without a final *k* in the present tense; but on assuming another syllable, in forming the past tense and participles, the *k* must be used to keep the *c* hard; as, *trafficked*, *trafficking*.

10. The question respecting the letter *u*, in words ending in *or* or *our*, — as, *favor*, *honor*, or *favour*, *honour*, — is attended with much more difficulty. Most of the words of this class are originally from the Latin, and are regarded as coming into the English through the French, having the termination in that language of *eur*; as, *faveur*, *honneur*; and this is the reason assigned by Johnson for retaining the *u*. But he is far from being consistent in applying the principle; for, with respect to the class of words which have the termination *or* in Latin, and *eur* in French, he gives many of them with the *u*, and many of them without it.

11. The following words are found in Johnson's Dictionary with the *u* in the last syllable: —

ambassadour	fervour	possessour
anterior	flavour	rancour
arbour	fulgour	rigour
ardour	governour	rumour
armour	harbour	savour
behaviour	honour	saviour
candour	horror	splendour
clamour	humour	successour
clangour	inferiour	succour
cognisour	intercessour	superiour
colour	interiour	tabour
demeanour	labour	tenour
disfavour	marcour	terroure
dishonour	misbehaviour	tremour
dolour	misdeemeanour	tumour
emperour	neighbour	valour
enamour	odour	vapour
endeavour	orateur	vigour
errour	ostentatour	warriour
favour	parlour	

12. The following words are found in Johnson's Dictionary without the *u* in the last syllable immediately before *r*: —

actor	director	inspector	predecessor
antecessor	doctor	languor	professor
auditor	editor	lensor	protector
author	elector	liquor	rector
captor	equator	manor	sculptor
creator	executor	mirror	sectator
collector	exterior	motor	sector
conductor	factor	pastor	stupor
confessor	fautor	posterior	tailor
creditor	inquisitor	preceptor	tutor

riour, oratour, possessour, successour, and errour, written with the *u*; and those of many are offended by seeing *favor, honor, and savior*, written without it. It is difficult to fix the limit for a partial omission; and the rule, which entirely excludes the *u* from this class of words, and which is in accordance with the prevailing usage in the United States, is the most convenient, if not the most unexceptionable method.

RULES OF ORTHOGRAPHY.

13. The same principle will apply to the orthography of the last syllable of most of the words in the two lists; and the inconsistency will be obvious by merely comparing the words *anterior* and *interior*, which are written by Johnson with the *u*, with *posterior* and *exterior*, which are written without it. In some of the recent forms and abridgments of Johnson's Dictionary, the *u* is omitted in a part of the words in which he inserted it. Some of the English dictionaries, which have been published since the first publication of Johnson's, scrupulously follow him generally in retaining the *u*; yet they omit it in the words in which he omitted it. Several of the English dictionaries omit it in all these words, except most of the dissyllables in the first of the above lists, and the following words, which are not derived from the Latin: *behaviour, demeanour, misdeameour, endeavour, and common*, and their derivatives, *disfavour, dishonour, favourable, honourable, &c.* If we turn from the dictionaries to inquire what is the general usage of those who write the language, we shall find it in a very unsettled state. In the United States, it is the prevailing, though by no means the universal, practice to exclude the *u* from all this class of words. "In England," says Mr. Smart, (1836,) "such is not the practice of the day, although some years ago there was a great tendency towards it. The following, indeed, are inclined to the Latin termination, and some of them so decidedly, that to write them with *our* would incur the opinion of great singularity, if not of fault: *error, emperor, governor, warrior, superior, horror, tremor, dolor, tumor, tenor, conger, fulgor, savor.*" To these he might have added a number of others found in the first of the above lists, with equal propriety; yet, in England, it is the prevailing practice to retain the *u* in most of the dissyllables in the first list, as in such of the other words as are not derived from the Latin. The eye is offended at seeing a word spelled in a manner to which it is unaccustomed; and the eyes of most readers would now be offended at seeing *emperour, infe-*

14. Verbs of one syllable, ending with a single consonant, preceded by a single vowel, (as *plan*,) and verbs of two or more syllables, ending in the same manner, and having the accent on the last syllable, (as *regret*,) double the final consonant of the verb, on assuming an additional syllable; as, *plan, planned; regret, regretted*; — but, if a diphthong precedes the last consonant, (as *join*,) or the accent is not on the last syllable, (as *suffer*;) the consonant is not doubled; as, *join, joined; suffer, suffered.*

15. There is an exception to the last clause of the above rule, with respect to most of the verbs ending in the letter *l*, which, on assuming an additional syllable, are allowed, by general usage, to double the *l*, though the accent is not on the last syllable; as, *travel, travelling, travelled, traveller; libel, libelling, libelled, libeller, libellous; duel, duelling, dueller, duellist.* But the derivatives of *parallel* are written without doubling the final *l*; as, *paralleled, unparallelled.*

16. The following list comprises the verbs ending in *l*, which, without having the accent on the last syllable, yet commonly double the final *l*:—

apparel	dishevel	handsel	model	rival
bevel	drivel	hatchel	panel	rowel
bowel	duel	imperil	parcel	shovel
cancel	embowel	jewel	pencil	shrivel
carol	enamel	kennel	peril	snivel
cavil	empanel	label	pistol	tassel
channel	equal	level	pommel	trammel
chisel	gambol	libel	quarrel	travel
counsel	gravel	marshal	ravel	tunnel
cudgel	grovel	marvel	revel	unravel

17. The derivatives of these verbs are spelled, in the Dictionaries of Perry and Webster, with a single *l*; and this mode is also more or less favored by the lexicographers Ash and Walker, by Bishop Lowth, and by some other scholars; and it evidently better accords with the analogy of the language; though the prevailing usage is to double the *l*.

18. The verb *to bias* commonly doubles the *s* on assuming an additional syllable; as, *biassing*, *biassed*, *biasser*. The verb *to kidnap*, on assuming another syllable, always doubles the *p*; and the word *worship* also, according to general usage, does so; as, *kidnapping*, *kidnapped*, *kidnapper*; *worshipping*, *worshipped*, *worshipper*.

19. There is some diversity in usage, with respect to several other verbs ending in *p*, and also with respect to several ending in *t*, which, although the accent is not on the last syllable, are sometimes allowed to double the last consonant, when another syllable is added. But the more correct and regular mode is, to write them without doubling the final consonant, in the following manner:—

Benefit	benefited	benefiting
Buffet	buffeted	buffeting
Closet	closeted	closeting
Develop	developed	developing
Discomfit	discomfited	discomfiting
Envelop	enveloped	enveloping
Fillip	filliped	filliping
Gallop	galloped	galloping
Gossip	gossiped	gossiping
Limit	limited	limiting
Profit	profited	profiting
Rivet	riveted	riveting
Scallop	scalloped	scalloping
Wallop	walloped	walloping

20. There is a class of words, ending in *tre*, as *centre*, *metre*, &c., which are often written *center*, *meter*, &c.; but the former mode, which is followed in this Dictionary, is agreeable to the prevailing usage, and is supported by most of the English lexicographers.

21. There is a diversity with respect to the use of the letters *s* and *z* in a number of verbs ending in *ise* or *ize*; but the following rule is observed in this Dictionary:—When the word is a derivative of the French *prendre*, the termination is *ise*, as *surprise*, *enterprise*; but verbs derived from Greek verbs ending in *ιζω*, and others formed after the same analogy, are written with the termination *ize*; as, *agonize*, *characterize*, *patronize*.

22. Derivative adjectives ending in *able* are written without an *e* before a; as, *blamable*, *movable*, not *blameable*, *moveable*; except those of which the primitive word ends in *ce* or *ge*; in such the *e* is retained to soften the preceding consonant; as, *peaceable*, *changeable*.

23. Compound words formed by prefixing a word or syllable to a monosyllable ending in *all*, retain the double *l*; as, *appall*, *befall*, *bethrall*,

downfall, *forestall*, *fuzzball*, *headstall*, *install*, *inthrall*, *laystall*, *miscall*, *overfall*, *recall*, *saveall*, *thumbstall*, *waterfall*, *windfull*.—*Withal*, *there-withal*, and *wherewithal*, end with a single *l*.

24. A class of other compound words retain the final double *l* which is found in the simple words; as, *bridewell*, *foretell*, *downhill*, *uphill*, *molehill*, *watermill*, *windmill*, *handmill*.

WORDS OF DOUBTFUL OR VARIOUS ORTHOGRAPHY.

25. Very few of the words which belong to the several classes referred to in the above remarks, are comprised in the following Vocabulary; but, with the exception of these classes, this Vocabulary contains nearly all the English words with regard to which a diversity of orthography is, at present, often met with.

26. The orthography found in the left-hand column of the Vocabulary is deemed to be well authorized; but with respect to the authority of that which stands on the right hand, there is a great diversity. In some cases, this is nearly or quite as well authorized as that on the left hand; but in some instances, it has only a feeble support, and is rarely met with.

27. In some cases, words are so variously affected by etymology, analogy, lexicographical authority, and general usage, that it is difficult to determine what orthography is best supported. This is the fact with respect to the words *abridgment* or *abridgement*, *bass* or *base*, (in music,) *chintz* or *chints*, *connection* or *connexion*, *controller* or *comptroller*, *contemporary* or *colemorary*, *despatch* or *dispatch*, *dexterous* or *dextrous*, *diocese* or *diocess*, *divest* or *devest*, *duchy* or *dutchy*, *guarantee* or *guaranty*, *hinderance* or *hindrance*, *holiday* or *holyday*, *jail* or *gaol*, *judgment* or *judgement*, *marquis* or *marquess*, *loadstone* or *lodestone*, *loadstar* or *lodestar*, *meagre* or *meager*, *naught* or *nought*, *preterit* or *preterite*, *pumpkin* or *pompion*, *recognizance* or *recognisance*, *sceptic* or *skeptic*, *strew* or *strove*, *thresh* or *thrash*, *weave* or *weare*, (to put off,) *woe* or *weo*, *yelk* or *yolk*, and various others.—See the following words in the Dictionary: *DESPATCH*, *GUARANTEE*, *JUDGMENT*, *SCEPTIC*, *SOLIFED*, *SOOTHE*, and *TRAVELLER*.

28. There is a class of words which have, in their derivation, a twofold origin, from the Latin and the French languages, and are indifferently written with the first syllable *en* or

is, the former being derived from the French, and the latter from the Latin. With respect to some of these, it is difficult to determine which form is best supported by usage. This is the fact in relation to the words *enclose* or *inclose*, *inspire* or *enquire*, *insure* or *ensure*, and several others. A few of these words, respecting which the two forms are about equally authorized, are placed in the left-hand column in each mode, and stand in a corresponding manner in the Dictionary; but those which are not repeated under the two initial letters *E* and *I*, stand, with the orthography which is most approved, in the left-hand column. There is a class of chemical terms, most of which have been recently introduced into the language, which have the termination *ine* or *in*; as, *chlorine*, *iodine*, *olivine*; or *chlorin*, *iodin*, *olirin*. They are often seen in scientific works in both forms; but in this Dictionary the final *e* is retained in this class of words.

21. There are some words, of which the present established orthography is at variance with the most approved dictionaries. This is true with respect to the words *chemistry*, *chemist*, *aster*, *aythe*, *caste*, in the sense of a class or tribe, and *forte*, denoting a strong side, or that in which one excels. The orthography of these words which is here countenanced, though different from that best supported by the diction-

aries, is the one which is now established by general usage.

30. Although the orthography of the word *show*, as here exhibited, is uniformly supported by the best dictionaries, and also best corresponds to its pronunciation, yet the other form, *shew*, maintains its ground by a usage quite as common with the best authors. — See *Show*, in the Dictionary.

31. With respect to the word *mosquito* or *musquito*, which appears in such a variety of forms, the spelling here preferred, though little supported by the dictionaries, is used in works of science. The form *mosquito* is the orthography of the Spanish and Portuguese languages, from which the word is derived, and the one commonly made use of with respect to various geographical places to which the term is applied.

32. The two different modes of spelling a few of the words in the Vocabulary, are in established usage, and one is to be preferred to the other according to the sense in which the word is used; as, for example, the orthography of *flour* instead of *flower*, though not recognized by Johnson, is now well established, when the word is used to denote the *edible part of corn*; also the orthography of *dye* instead of *die*, in the sense of *color*, or *to tinge with color*, is in common and good use; yet the forms *flower* and *die* are unquestioned, when the words are used in other senses.

III.—ENGLISH GRAMMAR.

In this Dictionary care has been taken to give all the irregular grammatical forms of words. All the verbs of the language which are often met with, whether regular or irregular, are conjugated; the plural forms of irregular nouns are exhibited; and occasional observations are made in relation to the grammatical construction and use of words.

It is not deemed expedient to give here any general system or outline of grammar; but the design is merely to furnish, on various topics of practical grammar, some notices and remarks, which could not properly be introduced into the body of the Dictionary, and which may facilitate the use of the work.

The parts of speech in the English language are commonly reckoned nine, or, if the participle is considered a distinct part of speech, ten; namely, the Article, Noun, Pronoun, Adjective, Verb, Participle, Adverb, Conjunction, Preposition, and Interjection.

THE ARTICLE.

The article is a word prefixed to nouns to point them out, or to limit their signification. The articles are *a*, or *an*, and *the*; as, *a* book, *an* apple, *the* man. — For the use of the articles, see *A*, *AN*, and *THE*, in the Dictionary.

THE NOUN.

A noun, or substantive, is the name of any thing that exists, or of which we have any idea. Proper nouns are the names of individuals, whether persons or things; as, *Alexander*, *America*, *London*. Common nouns are the names of genera or classes. English common nouns are the appellatives or substantives of the English language, or are such as are contained in dictionaries of the language.

English nouns are mostly formed by affixing to the radical parts of words the terminations

an, *ance*, *ant*, *ar*, *ard*, *art*, *ary*, *cer*, *ent*, *er*, *ier*, *ist*, *ive*, *or*, *ster*, *de*, *ee*, *ile*, *acy*, *age*, *ancy*, *ence*, *ency*, *head*, *hood*, *ion*, *ity*, *ism*, *ment*, *mony*, *ness*, *on*, *ry*, *ship*, *t*, *th*, *tude*, *ty*, *ure*, *y*, *dom*, *cule*, *de*, *el*, *il*, *el*, *in*, *ine*, *kin*, *let*, *ling*, *ock*, *ule*.

Nouns have three cases, *nominative*, *possessive*, and *objective*; three genders, *masculine*, *feminine*, and *neuter*; and two numbers, *singular* and *plural*.

The plural number is generally formed by adding *s* to the singular; as, *book*, *books*; *dove*, *doves*. But if the singular ends in *s*, *ss*, *sh*, *ch* soft, or *x*, the plural is formed by the addition of *es*; as, *rebus*, *rebuses*; *mass*, *masses*; *lash*, *lashes*; *church*, *churches*; *fox*, *foxes*. If the singular ends in *ch* hard, the plural is formed by adding *s* only; as, *monarch*, *monarchs*. If the singular ends in *o*, preceded by another vowel, the plural is formed by the addition of *s*; as, *folio*, *folios*; *cameo*, *cameos*; *bamboo*, *bamboos*; *embryo*, *embryos*; but if the final *o* is preceded by a consonant, the plural is commonly formed by adding *es*; as, *cargo*, *cargoes*; *hero*, *heroes*. The following nouns, however, *cento*, *cento*, *grotto*, *junto*, *portico*, *rotundo*, *salvo*, *solo*, *tyro*, *duodecimo*, *octavo*, *quarto*, and some others derived from foreign languages, and hardly Anglicized, as *albino*, *domino*, &c., commonly have their plural formed by the addition of *s* only to the singular; as, *cento*, *centos*. But there are some, respecting which usage is not uniform. We sometimes see the plural of *duodecimo*, *octavo*, and *quarto*, written with the addition of *es*, thus, *duodecimoes*, *octavoes*, *quartoos*; and we also sometimes see the plural of *volcano* written *volcanos*.

There is a class of nouns, forming the names of various arts and sciences, which have a plural termination in *ics*, but have no singular termination; as, *ethics*, *mathematics*, *mechanics*, *metaphysics*, *mnemonics*, *politics*, &c. All nouns of this class are generally considered by grammarians as properly plural; though we sometimes see them, or some of them, joined to verbs in the singular number by respectable writers.

Nouns of the singular number ending in *y* preceded by a consonant, form their plurals by changing *y* into *ies*; as, *lady, ladies*; *body, bodies*; but those ending in *y* preceded by a vowel, form their plurals regularly, by the addition of *s* only to the singular; as, *valley, valleys*; *attorney, attorneys*, &c. These plurals are sometimes erroneously written *vallies, attornies*, &c.

There is a class of nouns ending in *f*, or *fe*, viz. *beef, calf, elf, half, knife, leaf, life, loaf, self, sheaf, shelf, wife, wolf*, which form their plurals by changing *f*, or *fe*, into *ves*; as, *beeves, calves*, &c. The word *wharf*, according to the prevailing American usage, is conformed to this class, having for its plural *wharves*; though, according to English usage, the plural is *wharfs*. — *Staff* commonly has *staves* in the plural; but other nouns ending in *ff*, and also in *f*, except those above enumerated, form their plurals regularly, by adding *s* to the singular; as, *muff, muffs*; *proof, proofs*, &c.

There is a considerable number of words derived from the Greek and Latin languages, which are often used in English, and are more or less Anglicized, and of which the Greek and Latin plurals are sometimes used, and sometimes plural's formed according to the analogy of the English language. Of this class are *encomium, memorandum, medium, radius, dogma*, of which the Latin plurals are *encomia, memoranda, media, radii, dogmata*; the English, *encomiums, memorandums, mediums, radiuses, dogmas*. The two plurals are generally given, in this Dictionary, under such words as admit the use of both.

There are some words which have the plural form, but which are used in both the singular and the plural number, or respecting the number of which there is a want of agreement among grammarians. Of this class are *alma, bellows, fowls, means, news, and pains*. — See these words in the Dictionary.

N is formed by the addition of *ful* (from the adjective *full*) to another word, as *mouthful, spoonful*, are regarded as indivisible compounds, and form their plurals in a regular manner by the addition of *s*; as, *mouthfuls, spoonfuls*. But some compound nouns, which have the parts of which they are compounded connected by hyphens, have the plural termination affixed to the first part; as, *aide-de-camp, aides-de-camp*; *uncle-german, cousins-german*; *court-martial, wars-martial*; *father-in-law, fathers-in-law*.

THE PRONOUN.

The different kinds of pronouns are specified in the notice of the word *Pronoun*, in the Dictionary, where they are also severally noticed.

THE ADJECTIVE.

An adjective is a word added to a noun to express its quality, or limit its meaning; as, a good man; a green field; three apples.

A great part of the adjectives of the English language are formed by affixing to the radical parts of words the terminations *ac, al, an, ar, ary, en, ic, ical, id, ile, ine, ory, ate, ful, ose, ous, some, y, ish, like, ly, ive, able, ible, ule, less*.

Most adjectives have two variations from the simple or positive form of the word, called *degrees of comparison*, namely, the comparative and superlative.

In words of one syllable the comparative is commonly formed by adding *r* or *er* to the positive; as, *wise, wiser*; *soft, softer*; and the superlative, by adding *st* or *est*; as, *wise, wisest*; *soft, softest*.

Adjectives of more than one syllable are commonly compared by prefixing *more* and *most* to the positive; as, *useful, more useful, most useful*. — The termination *ish*, annexed to the positive, denotes a diminution of the quality; as, *black, blackish*.

Several adjectives form their degrees of comparison in an irregular manner. These are *good, bad, little, many, much, near, late, and old*. — See these words in the Dictionary.

THE VERB.

A verb is a part of speech which signifies *to be, to do, or to suffer*; or it is a word by means of which something is affirmed respecting some person or thing; as, *I am*; *you hear*; *he is instructed*.

The person or thing respecting which any thing is affirmed, is called the *subject*. A verb in the infinitive mode is not connected with any subject, and no affirmation can be made by it.

Verbs are divided into *active or transitive*, and *neuter or intransitive*. In this Dictionary, as well as in most other modern English dictionaries, verbs to which *v. a.* is annexed are *active*, or *transitive*, verbs; and those to which *v. n.* is annexed are *neuter*, or *intransitive*, verbs.

An *active*, or *transitive*, verb expresses an action passing from an agent or actor to some

object acted upon; and it requires the addition of an object to complete the sense; as, "The master *teaches* the pupil," or "The master *teaches* him." Here *pupil* and *him* denote objects acted upon, and are in the objective case, governed by the active or transitive verb *teach*.

A *neuter*, or *intransitive*, verb expresses neither action nor passion, but being or state of being; and it does not require the addition of an object to complete the sense; as, "He *is*;" "The sun *shines*." — There is a class of verbs which are generally ranked among neuter verbs, and which denote action confined to the subject, without any object acted upon; as, "I *run*;" "He *walks*." These are, by some grammarians, styled *active-intransitive* verbs, in distinction from *active-transitive* verbs.

A *passive verb* is formed by associating the perfect participle of an active verb with some tense of the verb *to be*; and it implies an object acted upon, and an agent by which it is acted upon; as, "Cæsar *was slain* by Brutus."

A *regular verb* is one which forms its imperfect tense and perfect participle by adding *d* or *ed* to the present; as, *love, loved*; *call, called*.

An *irregular verb* is one which does not form its imperfect tense and perfect participle by adding *d* or *ed* to the present; as, present *write*, imperfect *wrote*, perfect participle *written*.

All the verbs of the English language, which are often used, whether regular or irregular, are carefully conjugated, where they severally occur, in this Dictionary. It is, therefore, not deemed necessary to insert here a table of irregular verbs.

Auxiliary verbs, called also *helping verbs*, are those by means of which English verbs are principally conjugated. They are *do, be, have, must, may, can, shall, will*, with their inflections. *Might, could, should, and would*, which are regarded as the imperfect or past tenses of *may, can, shall, and will*, commonly imply past time; yet they are sometimes used in the conditional present and future tenses.

Many verbs are formed by affixing, to the radical parts of words, *ate, en, fy, ish, ise, ize*.

THE CONJUGATION OF VERBS.

The conjugation of a verb is the regular combination and arrangement of its several numbers, persons, moods, and tenses.

The conjugation of an active verb is styled the **ACTIVE VOICE**, and that of a passive verb, the **PASSIVE VOICE**.

The auxiliary and the active verb *To Have* is conjugated in the following manner:—

TO HAVE.

Infinitive Mood.

Present, To be loved. *Perfect*, To have been loved.

Participles.

Present, Being loved. *Perfect*, Been loved.
Compound Perfect, Having been loved.

THE PARTICIPLE.

The *participle* is, by some grammarians, considered as a distinct part of speech, and by others it is regarded only as a form of the verb. It is derived from the verb, and partakes of the signification and properties of the verb. It is an adjective form of the verb, and, like an adjective, belongs to a noun; and it signifies doing, being, or suffering, without affirming any thing. It becomes a noun by prefixing to it the definite article *the*. — There are three participles: the present, ending in *ing*, as *moving*; the perfect, past, or passive, ending (if the verb is regular) in *ed*, as *moved*; and the compound perfect, as *having moved*.

The participle in *ing*, though properly and generally active, is sometimes used in a passive sense; as, "Forty and six years was this temple in building." *John* ii. — "The nation

had cried out loudly against the crime while it was committing." *Bolingbroke*. — "My Lives are reprinting." *Johnson*. — Within a few years, a strange and awkward neologism has been introduced, by which the *present passive participle* is substituted, in such cases as the above, for the participle in *ing*; and in the above examples, instead of "in building," "was committing," and "are reprinting," the modern innovators would say, "in being built," "was being committed," "are being reprinted." This new form has been used by some respectable writers. The following are instances of it: "For those who are being educated in our seminaries." *R. Southey*. — "It was being uttered." *Coleridge*. — "The foundation was being laid." *Brit. Critic*. — "It [τετυμμένος] signifies properly, though in uncouth English, one who is being beaten." *Abp. Whately*. — "The bridge is being built, and other phrases of the like kind, have pained the eye." *D. Booth*. — This phrase "in uncouth English" has been censured by many, and defended by some. The *Eclectic Review* remarks, "That a need of this phrase, or an equivalent one, is felt, is sufficiently proved by the extent to which it is used by educated persons and respectable writers."

THE ADVERB.

An adverb is a word added to a verb, an adjective, and sometimes to another adverb, to express some quality or circumstance respecting it; as, "He writes *well*;" "A *truly* excellent scholar;" "He speaks *very* correctly." A great many adverbs are formed from adjectives by the addition of *ly*, or by changing *e* to *y*; as, *wise*, *wisely*; *noble*, *nobly*.

THE PREPOSITION.

Prepositions show the relations between words, and are generally placed before nouns and pronouns in the objective case.

There are many nouns, adjectives, verbs, and participles, which are followed by their appropriate prepositions; and there are instances in which it is a matter of some difficulty to determine what preposition is most suitable to be used. The following list comprises a considerable number of words, with the proper preposition subjoined.

IV.—ORIGIN, FORMATION, AND ETYMOLOGY OF THE ENGLISH LANGUAGE.

1. THE earliest authentic event recorded in the history of Britain, was the landing of Julius Cæsar on the eastern shore, fifty-five years before the Christian era. The country was then inhabited by the Britons, a Celtic race, who continued to hold possession of it till the middle of the fifth century. Of their language, styled the *Celtic*, or, with reference to Britain, the *British*, few traces now exist in England, except in geographical names, as those of some towns, mountains, rivers, lakes, &c.; but the remains of it are to be found in the Gaelic of the Scottish Highlands, in the Welsh, the Erse or Irish, and the Manks language, in the Isle of Man.

2. About the middle of the fifth century, the Saxons from Lower Germany invaded the island; and, before many years elapsed, they established their authority over the most of that part of it which is now called England; and the Britons were driven into Wales. From a leading branch of the Saxons, called *Angles*, the country received its name of *England*, and the new language was denominated from them the *Anglo-Saxon*; often also called simply the *Saxon*. At the time of their invasion, the Saxons were an illiterate people; but they afterwards cultivated learning to some extent; and among their principal writers were Gildas, Cædmon, Ælfric, Bede, and King Alfred.

3. The Anglo-Saxon dynasty, after having continued about six hundred years, was terminated, in 1066, by the invasion of William, Duke of Normandy, commonly called the *Conqueror*. The Norman French now became the language of the court and the upper classes, while the Saxon continued to be the only speech of the common people or peasantry. In the course of time, these two languages were blended into one, and became the basis of the present English. "The Saxon power," Dr. Bosworth remarks, "ceased when William the Conqueror ascended the throne, but not the language; for Anglo-Saxon,

after rejecting or changing many of its inflections, continued to be spoken by the old inhabitants till the time of Henry III., A. D. 1258. What was written after this period has generally so great a resemblance to our present language, that it may evidently be called English." The following is the statement of Hippiusley, a late English writer: "Although neither the origin nor subsequent progress of English can be assigned to any specified dates, yet, for the sake of perspicuity, we may (as in the case of general history) establish arbitrary and conventional divisions. Thus we say, generally speaking, that about 1150 may be dated the decline of pure Saxon; about 1250 the commencement of English; and that the century between these two dates was occupied by a kind of semi-Saxon language."

4. After the Norman conquest, the Saxon laws were continued in force, and were translated into Norman French. "The proceedings," as stated by Blackstone, (Commentaries, Book III. chap. 21,) "were all written, as indeed all public proceedings were, in Norman or law French, and even the arguments of the counsel and the decisions of the court were in the same barbarous dialect. This continued till the reign of Edward III., who, having employed his arms successfully in subduing the crown of France, thought it unbecoming the dignity of the victor to use any longer the *language* of a vanquished country. By a statute, therefore, passed in the 36th year of his reign [1362,] it was enacted, that, for the future, all pleas should be pleaded, shown, defended, answered, debated, and judged, in the English tongue, but be entered and enrolled in Latin." This is the date of the triumph of the English language over the French in the English courts of law.

5. In the fourteenth century flourished Chaucer, the great early English poet; also Sir John Mandeville, the traveller, and John Wicliffe, the reformer, both distinguished as early English

poor writers. But the times, long after the age of Chaucer, continued barbarous, and, till after the invention of printing and the revival of learning, few writers appeared to cultivate and improve the language, or to enrich it with valuable works. It was in the sixteenth century, during the reign of the Tudor family, that the language assumed, substantially, the external form in which it is now found, and became enriched by many productions which still form a part of its standard literature.

6. The Saxon or Anglo-Saxon language, which is a branch of the Teutonic, the language of the Teutones, a people who inhabited a large part of central Europe, while the Celts occupied the west, is the parent language of the English. Some of the other north European languages, of the great Teutonic or Gotho-Teutonic family, which have contributed to enrich the English tongue, are the Danish, Swedish, Norwegian, and Icelandic, of the Scandinavian branch, and the German and Dutch, of the Germanic branch. The south European languages which have furnished the latest contributions, are the Greek, Latin, and French; especially the Latin, through the medium of the French or Norman French; also the Italian, the Spanish, and various other languages, have afforded more or less.

7. The Anglo-Saxon is the language to which the English owes its general form and structure, and the particles on which its syntax depends, its pronouns and conjunctions; nearly all its monosyllables, most of its monosyllables, and, next, all the words that are most frequently repeated on the same page.

8. The predominance of Anglo-Saxon will be made more evident by analyzing a passage in any English writer. Of the sixty-six words which are comprised in the Lord's prayer, there are only five that are not Anglo-Saxon. Mr. Samuel Turner, in his "History of the Anglo-Saxon," has adduced from popular English writers sixteen extracts, in which he has distinguished, by Italics, the words which are Anglo-Saxon from those of foreign origin. Two of these extracts are here quoted, and also the results of the comparisons of all of them are given. The words which are not Anglo-Saxon are italicized in the following extracts:—

And they made ready the *present* against *darkness* came at noon; for they heard that they *could* not bread there. And when *Joseph* came *and* they brought him the *present* which was *in* his hand into the house, and bowed them-

selves to him to the earth. And he asked them of their welfare, and said, Is your father well, the old man of whom ye spake? Is he yet alive? And they answered, Thy *servant* our father is in good health, he is yet alive. And they bowed down their heads, and made *obeisance*. And he lift up his eyes, and saw his brother *Benjamin*, his mother's son, and said, Is this your younger brother, of whom ye spake unto me? And he said, God be *gracious* unto thee, my son."—*Gen. xliiii. 25—29.*

10. "Of *genius*, that *power* which *constitutes* a *poet*; that *quality* without which *judgment* is cold and knowledge is *inert*; that *energy* which *collects*, *combines*, *amplifies*, and *animates*; the *superiority* must, with some *hesitation*, be *allowed* to *Dryden*. It is not to be *inferred*, that of this *poetical vigor* *Pope* had only a little, because *Dryden* had more; for every other writer since *Milton* must give *place* to *Pope*; and even of *Dryden* it must be said, that if he has brighter *paragraphs*, he has not better *poems*."—*Johnson.*

11. In the following table, the figures in the left-hand column show the whole number of words in the above two, and also in the fourteen other, extracts or passages from popular English writers; and those in the right-hand column, the number of words in each, which are not Saxon.

	Words.	Not Saxon
Genesis,	130	5
John xi. 32—36,	74	2
Shakspeare,	81	13
Milton,	90	16
Cowley,	76	10
Thomson,	78	14
Addison,	79	15
Spenser,	72	14
Locke,	94	20
Pope,	84	28
Young,	96	21
Swift,	87	9
Robertson,	114	34
Hume,	101	38
Gibbon,	80	31
Johnson,	87	21
Total, 1522		291

12. Of the total number of words in these sixteen passages, the proportion not Saxon is somewhat less than one fifth. It is to be observed, that, in this computation, every repetition of a word is counted. In the verses quoted from Genesis, the word *and*, for example, is repeated, and therefore counted, twelve times.

13. In the first chapter of the common version of St. John's Gospel, there are one thousand and three words, of which, excepting fifty-three proper names, there are only fifty-five that are not Anglo-Saxon. In this chapter the particle *the* occurs sixty-eight times; *and*, sixty-one times; *of*, thirty-nine times; *that*, nineteen times; *unto*, fifteen times; *to*, thirteen times. Of the three personal pronouns, *I*, *thou*, and *he*, including their oblique forms, those of the first person occur thirty-three times; those of the second, thirty times; those of the third, eighty times. The verb *to be*, in its different inflections, occurs forty-six times. All these words, of so frequent occurrence, are Anglo-Saxon. There is, perhaps, no book in the English language in which Anglo-Saxon words more abound than in the common version of the Bible. Works which treat of the common affairs of life, have the greatest proportion of such words, and scientific works, the least.

14. "If we look not merely at the number of the words which the Anglo-Saxon has contributed to the English, but to the *kinds* of words, as well as to the share it has had in its formation and development, we shall at once see that there is no comparison between the importance of this and that of any other element. English grammar is almost exclusively occupied with what is of Anglo-Saxon origin. Our chief peculiarities of structure and of idiom are essentially Anglo-Saxon; while almost all the *classes* of words, which it is the office of grammar to investigate, are derived from that language. And though these peculiarities of structure may occupy little space, and these words be very few compared with those to be found in Johnson's Dictionary, they enter most vitally into the constitution of the language, and bear a most important part in shaping and determining its character. Thus what few inflections we have are all Anglo-Saxon. The English genitive, the general modes of forming the plural of nouns, and the terminations by which we express the comparative and superlative of adjectives, *er* and *est*; the inflections of the pronouns; of the second and third persons, present and imperfect, of the verbs; of the preterits and participles of the verbs, whether regular or irregular; and the most frequent termination of our adverbs (*ly*), are all Anglo-Saxon. The nouns, too, derived from Latin and Greek, receive the Anglo-Saxon terminations of the genitive and the plural, while the preterits and participles of verbs, derived from the same sources, take Anglo-Saxon inflec-

tions. As to the parts of speech, those which occur most frequently, and are individually of most importance, are almost wholly Anglo-Saxon. Such are our articles and definitives generally; as, *an*, *the*, *this*, *that*, *these*, *those*, *many*, *few*, *some*, *one*, *none*; the adjectives whose comparatives and superlatives are irregularly formed, and which are, in every language, among the most ancient, comprehensive in meaning, and extensively used; the separate words *more* and *most*, by which we as often express the forms of comparison as by distinct terminations; all our pronouns, personal, possessive, and interrogative; nearly every one of our so-called irregular verbs, including all the auxiliaries, *have*, *be*, *shall*, *will*, *may*, *can*, *must*, by which we express the force of the principal varieties of mood and tense; all the adverbs most frequently employed, and the prepositions and conjunctions almost without exception."

"The English language consists of about 38,000 words. This includes, of course, not only radical words, but all derivatives, except the preterits and participles of verbs; to which must be added some terms, which, though set down in the dictionaries, are either obsolete, or have never ceased to be considered foreign. Of these about 23,000, or nearly five eighths, are of Anglo-Saxon origin. In Bosworth's Anglo-Saxon Lexicon, there are from 25,000 to 28,000 words, counting, of course, compound words as well as roots. Supposing one fifth of these obsolete, there would remain nearly the numbers already stated."—*Edinburgh Review*, vol. lxx.

15. "The peculiar structure of the English language is far from having been investigated, as yet, with that degree of attention and accuracy that it deserves. Among other things, we do not find that any grammarian has been at the pains to take a full comparative view of its two great component parts; by which we mean, on the one hand, those words that are derived from the Saxon, Danish, and other northern languages, and, on the other hand, those from the Greek, Latin, French, and other idioms of the south of Europe. These two sets of vocabularies are so dissimilar from each other, that they appear, at first view, incapable of being amalgamated together, so as to form an harmonious whole; yet who is there that can read, feel, and understand, and does not admire the sublime harmony which Milton, Dryden, Pope, Shakspeare, Bolingbroke, and the other immortal poets and prose writers of Great Britain,

have produced out of those discordant elements? To analyze, therefore, those elements, from which have resulted such inconceivable effects, is well worth the trouble of the grammarian and philologist; and the interesting discoveries to which such an inquiry will lead, will amply repay their learned labors. — As far as we have been able to judge from a superficial investigation of the subject, we are apt to believe that the English words of northern derivation are to those derived from the ancient, as well as the modern languages of Southern Europe, in the proportion of something more than three, but not quite as much as four, to one. As the southern words are, in general, polysyllabic, and make a conspicuous figure wherever they occur, many are apt to think their number greater than on examination it really appears to be." — *P. S. Duponceau*.

16. The number of words belonging to the English language has never been accurately ascertained, and it is difficult to ascertain its exactness; for it is difficult to form and apply the rules for computing the number. The number which is stated in the preceding extract from the *Edinburgh Review*, is thirty-eight thousand, which is considerably less than the number found in Johnson's Dictionary, as it was left by him. Of the great number of words which have been introduced into the language, in the various sciences, since the first publication of Johnson's Dictionary, very few are of Anglo-Saxon origin. By adopting so restricted a mode of computing the number of English words, as to exclude all compound and obsolete words, and all words introduced by the arts and sciences within the past century, and thus to reduce the number to 38,000, the proportion of Anglo-Saxon words would probably not be far from that above stated; that is, five eighths. The computation of Mr. Duponceau of the difference between the two classes of English words, those of northern and those of southern origin, must have been formed, not by examining the vocabulary of an English dictionary, but by examining the words as they occur on the pages of English books; and, as Anglo-Saxon words are much more frequently employed than those of a different origin, there may be no material inconsistency between his estimation and that of the *Edinburgh Review*.

17. The following are the principal *Anglo-Saxon* prefixes, namely, *a*, *be*, *em*, *en*, *fore*, *in*, *on*, *of*, *over*, *un*, and *under*; as, *ahead*, *be-*

friend, *embody*, *enable*, *forebode*, *imbosom*, *misdeed*, *outdo*, *overact*, *unbind*, *unlike*, *undergo*.

18. Some of the common *Anglo-Saxon terminations* are the following, namely, *er*, *ful*, *less*, *ly*, *ness*, *ship*; as, *writer*, *mindful*, *helpless*, *justly*, *goodness*, *partnership*.

19. The contributions of the *Latin* language to the English, are next, in importance and amount, to those of the Anglo-Saxon; and these contributions came chiefly through the medium of the French, or Norman French, in consequence of the Norman conquest. It has been stated by some philologists, that the English language is indebted to the Latin for the greater part of its vocabulary. This, however, is greatly exaggerated statement; yet the contributions from that language are great and important, and they enter extensively into the formation and etymology of English words. The Latin has furnished a large portion of the abstract and general terms, especially in the departments of theology, moral and political philosophy, and all the moral sciences; also a great part of the terms used in polite literature, and the language of polite life. A great part of the military terms in English, come directly from the French.

20. The following are *Latin* prefixes: *a*, *ab*, *abs*, from; as, *avert*, *abjure*, *abstract*; — *ad*, *a*, *ac*, *af*, *ag*, *al*, *an*, *ap*, *ar*, *as*, *at*, to; as, *adduce*, *accede*, *affix*, &c.; — *ante*, before; as, *antecedent*; — *circum*, about; as, *circumjacent*; — *con*, *co*, *cog*, *col*, *com*, *cor*, together, with; as, *conform*, *coëval*, *collect*, &c.; — *contra*, against; as, *contradict*; — *de*, down, from; as, *deface*, *degrade*; — *dis*, asunder; as, *disarm*; — *e*, *ex*, out of; as, *eject*, *exclude*; — *extra*, beyond; as, *extrajudicial*; — *in*, *ig*, *il*, *im*, *ir*, (when prefixed to a verb,) in; as, *indue*; (when prefixed to an adjective,) not; as, *invisible*; — *inter*, between; as, *intermix*; — *intro*, within; as, *introduce*; — *ob*, *oc*, *of*, *op*, for, in the way of; as, *object*, *occur*; — *per*, through; as, *pervade*; — *post*, after; as, *postscript*; — *pre*, before; as, *precede*; — *preter*, beyond; as, *preternatural*; — *pro*, for, forward; as, *proconsul*; — *re*, back, again; as, *return*, *rebuild*; — *retro*, backward; as, *retrospect*; — *se*, aside; as, *secede*; — *sine*, without; as, *sinecure*; — *sub*, *suc*, *suf*, *sug*, *sup*, *sus*, under, after; as, *subdean*, *suffice*, *suggest*, *supplant*, *suspect*; — *super*, above; as, *superabound*, *supernatural*; — *trans*, beyond; as, *transcend*; — *ultra*, beyond; as, *ultramarine*.

21. The following terminations are derived from the *Latin* or *French*: *able*, *ible*, *cle*, *ile*, *ial*,
(E*)

al, ian, an, ant, ent, fy, lar, ity, or, ous, tion, tire, tude, ture.

22. To the Greek, the English language is indebted for most of the terms in physical science, and, indeed, for a great part of the terms employed in all the arts and sciences.

23. The following are *Greek prefixes*: *a, (α,)* without; as, *acephalous*; — *ana, (ἀνά,)* through, again; as, *anagram*; — *anti, (ἀντί,)* against; as, *antichristian*; — *apo, (ἀπό,)* from; as, *apostate*; — *cata, (κατά,)* down, from side to side; as, *catalogue*; — *dia, (διά,)* through; as, *diagonal*; —

en, em, (ἐν,) as, *endemic*; — *epi, (ἐπί,)* upon; as, *epidemic*; — *hyper, (ὐπέρ,)* above; as, *hypercritic*; — *hypo, (ὕπο,)* under; as, *hypocrite*; — *meta, (μετά,)* beyond; as, *metaphysics*; — *para, (παρά,)* by the side of, near; as, *parallel*; — *peri, (περί,)* about; as, *perimeter*; — *syn, sy, syl, sym, (σύν,)* together, with; as, *synonymous, syllogism*.

24. The following *terminations* are from the *Greek*: *ic* and *ical*, from the Greek *ικος*; and Latin *icus*; *logy*, from *λόγος*; *graphy*, from *γράφω*; *ize*, from *ίζω*.

V.—ARCHAISMS, PROVINCIALISMS, AND AMERICANISMS.

1. THE English language, from the time of its first formation, has been subject to continual changes. Old words have been, from time to time, falling away, and new ones have been formed and brought into use. A large part of the words found in the early productions of English literature, such as those of Peter Langtoft, Robert of Gloucester, Robert Langland, (the reputed author of "Piers Ploughman,") Gower, Chaucer, Wicliffe, and Mandeville, are now obsolete; and in order to understand these works, further assistance is necessary than is afforded by modern dictionaries and grammars. Very few of the English writers who preceded the reign of Elizabeth, are now much read; and the obsolete words which their works contain may properly be consigned to glossaries accompanying the works, or to dictionaries of archaic words.

2 Several of these early productions have been published with glossaries attached to them, as the *Chronicles of Peter Langtoft and Robert of Gloucester*, by Hearne; and the works of Chaucer, by Tyrwhitt. Glossaries have also been appended to Spenser and Shakspeare. Some words of a more general nature, relating to obsolete or archaic words, have, not long since, appeared; as "Nares's Glossary or Collection of Words, Phrases, &c., found in Shakspeare and his Contemporaries," and Toone's "Glossary and Etymological Dictionary of the Rare and Uncommon Words." Jamieson's "Etymological Dictionary of the Scottish Language," also contains numerous archaic, as well as provincial, words. Boucher's "Glossary of Archaic and Provincial Words" (designed to be a large work in 4to.) was commenced in 1832; and only two numbers of it have been published. The publication, in a series of numbers, of Halliwell's "Dictionary of Archaic and Provincial Words and Obsolete Phrases, Proverbs, and Ancient Customs, from the 14th Century," was commenced in 1844, and promises to embrace

as great a number of words as are found in a dictionary of modern English.

3. The early bilingual dictionaries, such as the English and Latin, and English and French, contain many obsolete words; and this is the fact with respect to many of the English dictionaries, as those of Bailey, Johnson, Ash, Richardson, and others. Johnson says, he "fixed Sidney's work [Sir Philip Sidney, who died in 1586] for the boundary, beyond which he made few excursions." Johnson's Dictionary, however, as he left it, contains many obsolete words, a considerable portion of which were taken from Bailey's Dictionary, though of such words he did not take near all that are found in Bailey. Of the words added by Mr. Todd, a much larger proportion are obsolete than of those admitted by Johnson; and of Todd's additional words, particularly in his second edition, there are many which are of merely local or provincial use, and some of them are unworthy of being inserted in a general dictionary of the language.

4. A dictionary of the English language, in order to be complete, must contain all the words, whether obsolete or not, found in books which are much read, such, for example, as the common version of the Scriptures, and the works of Shakspeare and of Milton; though there are many words in these works which are now obsolete, and many which, though not obsolete, are used in an obsolete sense, that needs explanation.

5. William Caxton, who first introduced printing into England, in his Preface to a Translation of Virgil's *Æneid*, printed in 1490, speaking of the innovations then made in the English language, and the differences of the language in the different parts of the kingdom, says, that he "toke an olde boke and redde therein, and certaynly the Englysshe was so rude and brood, that he coulde not wele understande it." "And certaynly," he says, "our language now used

varyeth ferre from that which was used and spoken when I was born. For we Englissh men ben borne under the domynacyon of the mone, which is never stedfaste, but ever waverynge, wexyng one season, and waneth and discreaseth another season; and that comyne Englishe that is spoken one shyre varyeth from another, insomuche, that in my dayes happened, that certayn merchautes were in a shipp in Tamyse; for to have sailed over the see into Zelande, and for lacke of wynde they taryed atte Forland, and went to lande for to refreshe them; and one of them, named Sheffielde, a mercer, came into an hows, and axed for mete, and specyally he axed for egges, and the goode wyf answerde, that she coude speke no Frenshe. And the marchaunt was angry, for he also coude speke no Frenshe, but wolde have hadde egges, and she understode him not. And then at laste another sayd, that he wolde have eyren; then the goode wyf sayd, that she understode him well. Loo what sholde a man in thysse days now wryte, egges or eyren? Certaynly it is hard to playse every man, by cause of dyversyte and chaunge of langage; for in these days every man, that is in ony reputacyon in his countre, will utter his communicacyon and matters in such manners and termes, that fewe men shall understonde them; and som honest and grete clerkes have been wyth me, and desired me to wryte the moste curyous termes that I coude find. And thus between playn, rude, and curious, I stand abashed. But in my judgemente, the comyn termes that be dayli used, ben lighter to be understonde than the olde aunicyent Englishe."

6. England abounds in provincialisms and local dialects; and in some districts of the country, the peculiarities of the language are so great, that the speech of the common people can be but imperfectly understood by those who are unacquainted with their peculiar dialect. These peculiarities, or archaisms, are of great antiquity, and, as stated by Forby, "are all, in substance, remnants and derivatives of the language of past ages, which were, at some time or other, in common use, though in long process of time they have become only locally used and understood."

7. Of the local dialects, one of the most noted is the Craven Dialect, which is spoken in the deanery of Craven, a district of upwards of thirty miles in length and nearly as many in breadth, situated in the northern part of the

west-riding of the county of York. Mr. Carr, the author of the "Craven Dialect and Glossary," maintains that it was "the language of crowned heads, of the court, and of the most eminent English historians, divines, and poets, of former ages." These provincialisms now form, to a great extent, the colloquial language of the lower classes; and many of them are found in the early productions of English literature; but in books of modern origin, they are seen chiefly in glossaries.

8. The Edinburgh Review [vol. lxxix. 1844] contains the following statement.

"The number of provincial words that have hitherto been arrested by local glossaries, stand as follows:—

Shropshire,	1,993	Sussex,	371
Devonshire and		Essex,	589
Cornwall,	878	Wiltshire,	592
Devonshire,		Hallamshire,	1,568
(North),	1,146	Craven,	6,169
Exmoor,	370	North Country,	3,750
Herefordshire,	822	Cheshire,	903
Lancashire,	1,932	Metropolitan	
Suffolk,	2,400	(Grose & Pegge)	3,500
Norfolk,	2,500		
Somersetshire,	1,204	Total,	30,677

9. "Admitting that several of the foregoing are synonymous, superfluous, or common to each county, there are, nevertheless, many of them which, although alike orthographically, are vastly dissimilar in signification. Making these allowances, they amount to a little more than 20,000; or, according to the number of English counties hitherto illustrated, at the average ratio of 1,478 to a county. Calculating the twenty-six unpublished in the same ratio, they will furnish 38,428 additional provincialisms, forming, in the aggregate, 59,000 words in the colloquial tongue of the lower classes, which can, for the chief part, produce proofs of legitimate origin; about the same number, in short, of authorized words that are admitted into Todd's edition of Johnson's Dictionary. Besides these and the private compilations made by individuals, in the course of their miscellaneous reading, there are some very copious early English Vocabularies lying in manuscript in the cathedral libraries of Durham, Winchester, and Canterbury, in the British Museum, King's College, and other depositories, deserving collection; as well as rare lexicographical volumes, which issued from the press in the infancy of typography."

10. A list of the English provincial glossaries

which contain the words above enumerated, may be seen on page lxxi. A considerable number of these provincialisms are to be found in Ash's English Dictionary, and also among the additions of Mr. Todd to Johnson's Dictionary. But, as they are not found in the classical or in the popular literature of England, and are rarely seen in print, except in the glossaries in which they have been collected, they have little claim to a place in a general dictionary of the language. Were education universally diffused throughout the country, and the children accustomed to use the same or similar elementary books of instruction, most of these provincialisms would soon be disused and forgotten.

11. The English language as it is spoken and written in the United States, differs somewhat from the language as written and spoken in any part of England; and it differs also, more or less, in the different States; but there is nothing here at all to be compared with the local dialects of England. The greater uniformity of language which exists in this country, is to be attributed to the frequent removals of the inhabitants from one place to another, their free intercourse with each other, and to the fact that elementary education is much more generally diffused among the middle and lower classes here, than in England. The Americans have formed their language more from books, and less from oral speech, than the English; and they are more in the habit of having recourse to a dictionary for instruction respecting the pronunciation and use of words.

12. The settlement of this country was commenced upwards of two centuries ago, chiefly by emigrations from different parts of Great Britain. The emigrants brought with them not only the common language of the country in the state in which it then existed, but also more or less of the local peculiarities; and in this way some of the English provincialisms have been widely diffused in the United States, and have even regarded as of American origin. The changes in the language, which have taken place within the last two centuries, have not been precisely the same on the two sides of the Atlantic; yet the difference is much less than might reasonably have been expected; and it is but too true a fact, that, among the great mass of the people throughout England, the deviations from what is there deemed the correct standard of speaking and writing the language, are much

greater than among the mass of the people of the United States.

13. The Americans have formed some new words; to some old ones they have affixed new significations; they have retained some which have become obsolete in England; some English provincialisms they have brought into common use; and there are many neologisms, consisting in part of new words, and in part of old words with new significations, in use both in England and in the United States, with regard to which it is difficult to determine in which country they originated.

14. A great part of the differences with respect to the language of the educated classes in the United States and in England, grow out of the different institutions and the different circumstances and employments of the people of the two countries. There is a considerable number of words which owe their origin to American institutions, social relations, and occupations, and which are properly used by Americans, but which Englishmen have no occasion to employ, except in speaking of American affairs. On the other hand, there is a still greater number of words which relate to the civil and religious institutions and social relations of Great Britain, and which are never used in the United States, except with reference to that country. Such differences as these have a legitimate origin, and may be regarded as proper, and not as corruptions of the language. But there are many neologisms, or new words, some of American, and still more of recent English origin, which are entitled to little countenance. A considerable number of such have been noticed in this Dictionary; but many have been passed by as plants suffered to remain and die in their native soil, being regarded as not worth transplanting.

15. Among the words which owe their origin or peculiar use to American institutions, are the following: *congress, congressional, president, presidential, senate, senatorial, gubernatorial, state, territory, town, general court, general assembly, selectmen, message, &c.* The words *executive* and *judiciary* are often used in the United States as nouns, but not often in England. The words *electioneer* and *electioneering*, which are much used here, are also used, in some degree, in England, though the more common terms used there, in the same sense, are *canvass* and *canvassing*, which are rarely used in this manner in the United States. The word *caucus* is of undisputed American origin.

Among the American ecclesiastical terms may be noted *association, associational, consociation, consociational, to approbate, to result, &c.*

16. Among the terms relating to the political and civil institutions of England, rarely used in this country, except with reference to England, may be enumerated the following: *parliament, parliamentary, prorogue, prorogation, hustings, exchequer, postman, tubmun, sergeant-at-law, assize, excise, bailiff, lords, commons, peerage, baronetage, knightage, &c.*: among the ecclesiastical terms, *establishment, conformity, non-conformity, dissenters, dean, deanery, archdeacon, archdeaconry, prebend, prebendary, canon, canonry, vicar, vicarage, curate, curacy, dignity, dignified, benefice, beneficed, advowson, commendam, donative, preferment, impropriation, impropriator, &c.* Among the many neologisms which may claim the undisputed honor of English origin, are *constituency, boroughmonger, squirarchy, shopocracy, conservatism, radicalism, liberalism, chartism, Anglicanism, high-churchism, dissenterism, voluntarism, &c.*

17. There is a difference between the two countries in relation to the terms employed to designate their respective literary institutions, and also with respect to the technical terms used in their universities and colleges. The following English university terms, for example, are not at all used here in the same sense: *act, wrangler, optime, bursar, commoner, sizar, pensioner, servitor, batteller, foundationer*; and the following American terms do not appear to be used in the same sense in England, namely, *commencement, senior, junior, sophomore, freshman, salutatory, beneficiary.*

18. Some words, more or less in use, are regarded as of Indian origin; as, *calumet, chocolate, hominy, moccason, mush, papoose, potato, pouwou, quahaug, sachem, sagamore, samp, succolash, squash, squaw, tobacco, tomato, tomahawk, wampum, wigwam, Yankee.*

19. Of the English provincialisms which are

often used in the United States, may be enumerated, *to will, to slump, to rile or to röl, slumpy, slosh, slush, sloshy, slushy, rily or roily, spunk, spunky, spry, squirm, squiggle, quackle, shole, &c.*

20. There is a considerable number of words the propriety of which has been disputed, but which are now often used both in the United States and in England. Such are the following: *to advocate, to base, to demoralize, to derange, to expatriate, to locate, to obligate, to test, to veto, prayerful, prayerless, profanity, unwell, &c.* The following words, which are more or less used in the United States, are little used in England: *to approbate, to belittle, to clapboard, to eventuate, to jeopardize, to loan; sundown, boatable, freshel, sled, sleigh, clapboard, shingle, prairie, snag, sawyer, vendue, sparse, bindery or bookbindery, lot, as a building lot, a house lot, a wood lot.*

21. The following words have senses affixed to them in the United States different from the senses in which they are commonly used in England: *baggage, balance, clever, cob, corn, creek, fall, lumber, merchant, quite, spell, stage, store*; also the verbs *to improve, to notify, to girdle, to guess, to expect, &c.*

22. There are some words which both English and American recent writers have used in a new sense; as, *to realize, to solemnize, to transpire*; *obnoxious, temper, &c.* Many of the neologisms which have been stigmatized as American innovations or corruptions, have been sanctioned by the use of English authors. The adjective *lengthy*, and the verb *to progress*, with the accent on the last syllable, are reputed to be of American origin; but, though they may probably have originated here, yet they seem to have been adopted in England; and comparatively higher authorities may be adduced in support of their use from English, than from American, writers. — See the words **LENGTHY, PROGRESS, CLEVER, &c.**, in the Dictionary.

VI.—HISTORY OF ENGLISH LEXICOGRAPHY.

1. **LEXICOGRAPHY** is a branch of literature which appears to have been but little cultivated in ancient times. It is doubtful whether the ancient Greeks and Romans ever wrote what would be properly called *dictionaries* of their respective languages. No such works written by them are now extant; nor is there positive evidence that any such ever existed. The terms *lexicon* and *dictionary* were not in use during the classic period of the Greek and Roman languages; but they are of comparatively modern introduction. Varro, who died B. C., wrote a work entitled "*De Lingua Latina*," which consisted of twenty-four books, of which only six, and these much mutilated, are now extant. One of the books contained a sort of glossary of Latin terms. Apollonius of Alexandria, commonly supposed to have lived in the time of Augustus, though some suppose him to have been much later, wrote a sort of glossary to Homer.

2. "The oldest extant Greek lexicographer," says the Penny Cyclopædia, "is Apollonius of Sigeus, a contemporary of Augustus. His work, entitled *Ἀλέξιος Ὀμπερναίος*, or 'Homeric Work' though much interpolated, is very useful. All the other original Greek lexicons and glossaries we have, such as the '*Onomasticon*' or Collection of Synonymes) of Julius Pollux, the lexicons of Suidas, Harpocration, and Hesychius, and the '*Etymologicon Magnum*,' sometimes attributed to Marcus Musurus, all three of the authors of some of them the exact age is disputed, were undoubtedly compiled subsequent, and most of them probably long subsequent, to the commencement of the Christian era. It is supposed, indeed, that they were founded upon older compilations of the same kind; but of the form of those lost with we know nothing. It may be reasonably argued if either the Greeks or Romans were in the habit of making use of dictionaries in order to a foreign language or dialect, as has been the general practice in modern times."

3. The following is a brief notice of a few of the earliest lexicographical works that are now extant. — Julius Pollux, a native of Naucratis, in Egypt, and a teacher of rhetoric at Athens, in the early part of the third century of the Christian era, was the author of the "*Onomasticon*," a Greek Vocabulary, divided into ten books. It contains a vast variety of synonymous words and phrases, arranged under general heads, but not alphabetically, and it partakes more of the nature of an encyclopædia, than of a dictionary. The first edition of it was printed at Venice in 1502.

4. Hesychius of Alexandria, by some stated to have lived as early as the third, and by others not before the fifth or sixth century, was the author of a Greek lexicon or glossary, consisting of short explanations of uncommon Greek words and technical terms. The first edition of it was printed at Venice in 1513.

5. Valerius Harpocration, a Greek rhetorician of Alexandria, wrote a work entitled "*Lexicon Decem Oratorum*," ("Lexicon to the Ten Orators,") which contains an account of many of the persons and facts mentioned in the orations of the ten principal orators of Athens. "We have," says the Penny Cyclopædia, "no particulars of his life, nor of the time in which he lived." Mr. Watt styles him "an Alexandrian rhetorician of the fourth century," and entitles his work "*Lexicon in decem Rhetores*." It was first printed at Venice in 1503.

6. Photius, patriarch of Constantinople, who died in 891, was the author of the *Ἀεξίων Συμπεπληγν*, a Greek glossary or lexicon, an edition of which, edited by Hermann, was published at Leipsic in 1808; and another, edited by Porson, was published in London in 1822.

7. Suidas, whose age and country are not ascertained, but who is supposed to have lived between 900 and 1025 A. D., was the author of a Greek Lexicon, styled by some an "Historical and Geographical Dictionary," also an "Encyclopædia." It comprises the names of men and places, as well as the words which properly

belong to a dictionary. The first edition was printed at Milan in 1499.

8. John Balbus, or Balbi, or John of Genoa, (being a Genoese,) who died in 1298, was the author of the "*Catholicon*," a Latin dictionary containing between seven hundred and eight hundred pages folio; first printed at Mentz, in 1460, by Gutenberg. "Although this work," says Watt, "contains many errors, it has the singularity of being the first Latin dictionary after the destruction of the language."

9. Johannes Crestonus (Placentinus), a native of Piacenza, was the author of the "*Lexicon Græco-Latinum*," the first Greek and Latin dictionary extant. The first edition, supposed to have been printed at Milan, is without date. The earliest edition, with a date, was printed at Vicenza in 1483.

10. Calepin, or Calepino, a native of Calepio, near Bergamo, in Italy, who died in 1510, was the author of the "*Dictionary*," a Latin dictionary, one of the earliest works of the kind, first printed at Reggio in 1502. It went through many editions, and received such additions as made it almost a new work. Facciolati, assisted by his pupil Egidio Forcellini, prepared and published a new edition in 1731. "It was," as is stated by the Penny Cyclopædia, "in the course of his joint labors with Facciolati, that Forcellini conceived the plan of a totally new Latin dictionary, which, after more than thirty years' assiduous application, he brought to light under the title of '*Totius Latinitatis Lexicon*,' four volumes folio, Padua, 1771. This work has superseded all other Latin dictionaries." An enlarged edition of this work, edited by James Bailey, was published in London in 1828; and it also formed the principal basis of the "*Lexicon of the Latin Language*," edited by F. P. Leverett, and first published at Boston in 1836. — "*Cornucopia*," "*Breviloquus Vocabularius*," and "*Gemma Vocabulorum atque Medulla*," are titles of other early lexicographical works on the Latin language.

11. The earliest lexicographical labors in England were performed near the end of the fifteenth century; and their object was to facilitate the study of the Latin language. The title of the earliest work of the kind published in that country, as given in Dr. Dibdin's "*Typographical Antiquities*," was as follows: "*Promptorius Puerorum. Promptorium Parvulorum, sive Clericorum. Medulla Grammaticæ*." It was first printed by Richard Pynson, in 1499, in folio. Editions of it were printed by Wynkyn de Worde,

in 1510, 1512, 1516, and 1528. "Richard Fraunce, a preaching or black friar," as is stated by William Herbert, the typographical antiquary, "was the author of this first English and Latin dictionary, in which are many old English words nowhere else explained." "This book," says Dr. Dibdin, "is printed in double columns; the English before the Latin; the nouns first, under each letter of the alphabet, the verbs, adverbs, &c., after them; both nouns and verbs are declined very particularly. The work was intended, as the commencement of the account of the third edition of it specifies, as a companion to the '*Ortus Vocabulorum*,' in Latin and English."

12. In 1500 (the next year after the first publication of the work above noticed) was printed by Wynkyn de Worde the first edition of the work bearing the following title, as stated in Dr. Dibdin's "*Typographical Antiquities*:" — "*Ortus Vocabulorum: alphabetico ordine fere omnia quæ in Catholico breviliquo Cornucopia Gemma Vocabulorum atque Medulla Grammatices ponuntur cum perpuleris Additoribus Ascens. et vernacula Lingua Anglicana expositionem continens*." This is the first edition of the first Latin and English dictionary, — "a work," says Dibdin, "of considerable importance to grammatical antiquaries, and the parent production of our popular Latin and English Dictionary by Ainsworth." Subsequent editions were printed in 1508, 1509, 1514, 1516, and 1518.

13. The next lexicographical work, and the first entitled a dictionary, (*dictionary*,) that was published in England, was the "*Didionarium*" (Latin and English) of Sir Thomas Elyot, who was a distinguished scholar in the reign of Henry VIII., a friend of Sir Thomas More, and the author of various works. It was first published in 1538; and the dates of other editions which appeared before the author's death, in 1546, are as follows; 1541, 1542, and 1545. The title of the edition of 1542, as given by Ames, is "*Bibliotheca Elioteæ, Eliotis Librerie*." It was dedicated to Henry VIII.; and the following is an extract from the dedication: — "To the moste excellent prince, and our moste redoubted souerayne lorde Kinge Henry the VIII., Supreme head in erthe immediately vnder Christe, of the Church of Englande. . . . About a yere passed, J beganne a Dictionarie, declaring latine by englishe. But whyles J was printyng, and vneth the half deale performed, your hyghnes being informed therof, by the reportes of gentyll maister Antony Denny, for his wysedome and diligence worthily

called by your hyghnesse into your priuie chamber, and of Wyllyam Tildisley, keper of your graces lybrarie, and after mooste specially by the recommendation of the most honourable lorde Crumwell, lorde priuie seale, &c., conserued of my labours a good expectation, and decaryng your moste noble and beneuolent nature, in fauouryng them that wyll be well occupied your hyghnesse, in the presence of dyuers of your noble men, commendynge myne enterprise, affirmed, that if J wolde earnestly trauallye to do, your highnes, as well with excellent counsaile, as with suche boke as your grace had, and J lacked, wolde therein ayde me. Wherefore moued J caused the printer to cesse, and beganne at the letter M, where J lefte, J passed forth to the last letter with a more diligent study. And that done, J estesones returned to my fyrst letter, and with a semblable diligence performed the remnant; — and under your gracious governance, your highnesse being my onely mayster, — hauynge fynished for this tyme this symple Dictionarie, wherein, J dare affirme, may be found a thousand mo latine words, than were together in any one Dictionarie publyshed in this royaltie at the tyme when J fyrste began to write this commentarie, which is almost two yeres passed. — Gyuynge to your maiestie mooste hartye thanks, as to the chiefe author thereof, by whose gracious meanes mine, beinge studious, may vnderstande better the latine tynge in syxe monethes, than they might haue doone afore in thre yeres, withoute anye instructours, whyche are not many, and such as be, are not easy to come by: the cause I neede not reherse, sens J ones declared it in my booke called the ‘Gouernour,’ which about VIII yeres passed J dydde dedicate vnto your highnesse.”

14. “This is a work,” says Dr. Dibdin, “of considerable ability, and deservedly held in great estimation, as one of the earliest and best attempts in the promotion of lexicographical literature.” After the death of Sir Thomas Elye, his Dictionary was corrected and enlarged repeatedly by Thomas Cooper, “Scholmaster of Mandlens in Oxforde,” afterwards Bishop of Lincoln; and in the edition of 1563, the title was changed to “*Thesaurus utriusque lingue Latine et Britannice* ;” Cooper having, according to Anthony Wood, “augmented and enriched it with 33,000 words and phrases.”

15. After the appearance of some smaller Latin and English dictionaries, the “Alvearie, or Triple Dictionarie, in English, Latin, and

French,” by John Baret, a scholar of Cambridge, was published in 1573; and to the second edition, published in 1580, he added the Greek, and entitled it the “Alvearie, or Quadruple Dictionarie.” In his address “To the Reader,” he gives a singular account of the manner in which the “Alvearie” was formed, from which the following extract is given:—

16. “About eightene yeeres agoe, having pupils at Cambridge, studious of the Latin tongue, I vsed them often to write epistles and themes together, and daily to translate some peece of English into Latin, for the more speedy and easie attaining of the same. And after we had a little begunne, perceyuing what great trouble it was to come running to mee for euery word they missed, (knowing then of no other Dictionarie to helpe us, but Sir Thomas Eliots Librarie, which was come out a little before,) I appoynted them certaine leaues of the same booke euery day, to write the English before the Latin, and likewise to gather a number of fine phrases out of *Cicero, Terence, Caesar, Livie, &c.* and to set them under seuerall Tytles, for the more ready finding them againe at their needs. Thus within a yeare or two they had gathered together a great volume, which (for the apt similitude betweene the good scholars and the diligent bees in gathering their wax and hony into their hieue) I called then their *Aluearie*, both for a memoriall by whom it was made, and also by this name to encourage other to the like diligence, for that they should not see their worthy prayse for the same unworthily drowned in obliuion. Not long after, diuers of our friendes borrowing this our worke which we had thus contriued and wrought onely for our own priuate vse, often and many wayes moued mee to put it in print for the common profit of others, and the publike propagation of the Latin tongue; or else to suffer them to get it printed at their proper costes and charges. But I both unwilling, and halfe ashamed to haue our rude notes come abroad under the view of so many learned eyes, &c. at length coming to London, there came unto mee a printer shewing mee *Hulats Dictionarie* (which before I neuer sawe) and tolde me he intended to print it out of hand, augmented with our notes also if I woulde. But this bargaine went not forward with him for diuers causes. Now therefore (gentle reader) looke not to finde in this booke, euery thing whatsoever thou wouldest seeke for, as though all thinges were here so perfect that nothing lacked, or were possible to

be added hereunto. But if thou mayst onely here finde the most wordes that thou needest, or at the least so many as no other Dictionarie yet extant or made hath the like: take then, I say, in good part this our simple *Aluearie* in the mean time, and giue God the praise that first moved mee to set my pupils on worke thereabout, and so mercifully also hath strengthened vs (thus as it is) at length to atchieue and finish the same."

17. The Latin and English dictionary of Dr. John Rider (an Oxford scholar, and afterwards bishop of Killaloe) was published in 1589. His additions, as he states, "amount to 4,000 words more than any one dictionarie now extant affords;" and, in his Preface, he says, "No one dictionarie, as yet extant, hath the English before the Latine, with a full index of all such Latine words as are in any common dictionarie." Rider's Dictionary was subsequently enlarged, first by Francis Holyoke, and afterwards by his son Thomas Holyoke. The Latin and English dictionaries of Gouldman, Coles, and Littleton, which appeared within a few years of each other, passed through various editions, — that of Coles, as many as eighteen; but they were all superseded by the Latin and English Dictionary of Robert Ainsworth, which was first published in 1736, in one volume 4to. The second edition, edited by Patrick, appeared in 1746, in two volumes 4to. In 1752, it was published in two volumes folio; in 1773, "a new edition with great additions and amendments," by Dr. Thomas Morell, appeared; and an improved edition, edited by Dr. Carey, was published, in 1816, in one volume 4to. "There have been," as stated by Lowndes, "abridgments of this work by Young, Thomas, Morell, and Jamieson."

18. Of the early English lexicographers, the object of whose labors was to facilitate the study of foreign modern languages, may be mentioned Percivale, the author of a "Spanish and English Dictionary," Cotgrave, author of a "French and English Dictionary," (with the English part by Sherwood,) and also Minsheu, author of the "Guide into the Tongues," first published in 1617, in eleven languages, — the English, British or Welsh, Low Dutch, High Dutch, French, Italian, Spanish, Portuguese, Latin, Greek, and Hebrew. A new edition was published in 1627, in nine languages, but with a considerable increase in the number of radical words. "In this," says Sir John Hawkins, "the author undertakes to give the etymologies or derivations of the greater part of the words therein contained; but, as they amount, at the most, to no

more than 14,173, the work must be deemed not sufficiently copious."

19. The object of the first lexicographical labors in England was to facilitate the study of the Latin language, afterwards that of the Greek, and also of foreign modern languages; and it was in these bilingual dictionaries, such as Latin and English, and French and English, that the common English words were first collected. The early dictionaries, which were designed for mere English readers, were very limited and meagre productions, their chief object being to explain what were styled the "hard words" of the language. Two of the earliest of these works were those of Bullokar and Cockeram. The former, the "English Expositor," by Dr. John Bullokar, was first published in 1616. It passed through many editions; and the title of the edition printed at Cambridge, in England, in 1688, is as follows: "An English Expositour, or Compleat Dictionary; teaching the Interpretation of the hardest Words and most useful Terms of Art used in our Language; first set forth by J. B., Dr. of Physick, and now the eighth time revised, corrected, and very much augmented." It is a little volume, 18mo., and contains only 5,080 words.

20. The English Dictionary of Blount, often written *Blunt*, was a larger work than any other of the kind that preceded it; and it was soon followed by a still more considerable one, that of Edward Phillips, the nephew and pupil of Milton. The title of Phillips's dictionary is "The New World of English Words, or a General Dictionary, containing the Interpretations of such hard Words as are derived from other Languages, whether Hebrew, Arabick, Syriack, Greek, Latin, Italian, French, Spanish, British, Dutch, Saxon, &c., their Etymologies and perfect Definitions." Sir John Hawkins says of this work, "The New World of Words," which, as it is much more copious than that of Blount, and contains a great quantity of matter, must be looked on as the basis of English lexicography." Though Phillips is entitled to the credit of having advanced the progress of English lexicography, yet his "World" is hardly deserving of being regarded as its "basis." The first edition is a small folio, of only three hundred pages, containing only about 13,000 words. Of these words, a large proportion are such as do not properly belong to a dictionary of the English language, but rather to an encyclopædia consisting of geographical and other proper names; and it contains but few words of genu-

the English growth; but the subsequent editions of the work were very much enlarged.

21. Phillips gives a list of the names of thirty-four "learned gentlemen and artists who contributed their assistance." He quotes from another author the following remark: "A dictionary for the English tongue would require an encyclopædic of knowledge, and the concurrence of many learned heads." "Such an encyclopædy," he says, "I present the reader with; a volume which the so many years' industry of myself and others hath brought to such perfection." In the publisher's advertisement of the work, it is thus characterized: "The so long expected work, *The New World of English Words, or a General Dictionary*, containing the terms, etymologies, definitions, and perfect interpretations of the proper significations of hard English words throughout the arts and sciences, liberal or mechanic, as also other subjects that are useful, or appertain to the language of our nation: to which is added the signification of proper names, mythology and poetical fictions, historical relations, geographical descriptions of the countries and cities of the world, especially of these three nations, wherein their chiefest antiques, battles, and other most memorable passages, are mentioned: a work very necessary for strangers, as well as our own countrymen, — for all persons that would rightly understand what they discourse, write, or read." After the death of the author, the sixth edition, edited by John Kersey, was published in 1706, "revised, corrected, and improved, with the addition of near 3,000 words from the best authors."

22. Phillips's Dictionary was followed by those of Coles and Kersey, which, though they were printed in a much smaller form, contained many more of the common words of the language. Dr. Watts, in his "Art of Reading and Writing English," published in 1720, thus notices the work of Kersey: "The best dictionary that I know for this purpose [spelling] is entitled '*A New English Dictionary*,' &c., by J. K. The second edition, 1713, in small octavo."

23. After Kersey's, and soon after 1720, appeared the celebrated Dictionary of Nathan Bailey, which was the first English dictionary in which an attempt was made to give a complete enumeration of the words of the language. Mr. Watt, in his "*Bibliotheca Britannica*," thus notices this work: "Bailey's English Dictionary, printed in 1728, (fourth edition,) was long the most in use, and still continues a favorite with many readers. It was afterwards enlarged

into two volumes 8vo., and some years after printed in folio, with additions in the mathematical part by G. Gordon, in the botanical by Philip Miller, and in the etymological by T. Lediard; the whole revised [1755] by Dr. Joseph Nicol Scott, a physician. The octavo [24th edition] was revised by Dr. Harwood, 1782."

24. A part of the long title of the first volume of the edition of 1728 is as follows: "An Universal Etymological English Dictionary; comprehending the Derivations of the Generality of Words in the English Tongue, either Ancient or Modern, from the Ancient British, Saxon, Danish, Norman and Modern French, Teutonic, Dutch, Spanish, Italian; as also from the Latin, Greek, and Hebrew Languages, each in their proper Characters; and also a clear Explication of all difficult Words derived from any of the aforesaid Languages; containing many thousand Words more than either Harris, Phillips, Kersey, or any English Dictionary before extant." The second volume was first published in 1727, as a supplement to the first; and it consists of two parts: — "I. An Additional Collection of some Thousands of Words not in the former Volume. II. An Orthographical Dictionary, showing both the Orthography and Orthoëpia of the English Tongue."

25. In his Preface to the first volume, Bailey says, "As for the *etymological part*, or those words from foreign languages, whence the English words were derived, I think I am the first who has attempted it in English, except what Mr. Blunt has done in his '*Glossography*,' which is but a very small part, and those of a Latin derivation chiefly, besides a small extract of Dr. Skinner's '*Etymologicon*.'" In his Introduction to the second volume, he remarks, "I have placed an accent over that syllable on which a particular stress or force of sound is to be laid by the voice in pronouncing." This appears to be the first instance in which any such aid to pronunciation was furnished in an English dictionary. The parts of speech were not noted in this nor in any previous English dictionary.

26. This lexicographer, who was a school-master at Stepney, was the author of several other works, among which were the "*Dictionarium Domesticum*, or a Household Dictionary," and "An Introduction to the English Tongue;" and he was the editor of several classical authors for the use of schools. He died, as it is stated in the "*Gentleman's Magazine*," in 1742. The following remarks are extracted from the *Encyclopædia Perthensis*: "It is somewhat

surprising that, though this work [Bailey's Dictionary] is universally known, having gone through at least twenty-six editions since the first edition, dedicated in Latin to Frederick Prince of Wales, and his royal sisters, (his majesty's [George III.] father and aunts,) was published, yet no account whatever has hitherto been given of the learned and laborious author, who excelled Dr. Johnson himself, in industry at least, by introducing a far greater number of words, in his small work of one volume 8vo., than the Doctor has inserted in both his volumes folio. We have searched in vain for an account of this learned lexicographer."—In reference to the above comparison of the number of words found in the dictionaries of Bailey and Johnson, it may be remarked, that Johnson omitted many words that are in Bailey's Dictionary, because they were not in use; but he inserted many not found in it. He speaks of "the deficiencies of dictionaries," with respect to the number of words, and says, he "has much augmented the vocabulary."

27. Dyche's Dictionary, a work in one volume 8vo., "originally begun by the Rev. Thomas Dyche, and finished by William Pardon," has had an extensive circulation in England. The seventh edition was published in 1752, and the sixteenth in 1777. This statement seems hardly consistent with the remark of Watt, above quoted, that Bailey's Dictionary "was long the only one in use."

28. Benjamin Martin, an ingenious man, and the author of several publications on scientific and philosophical subjects, published a dictionary of considerable merit. The first edition was printed in 1749; the second, in 1754.

29. In 1747, Dr. Johnson published a "Plan for a Dictionary of the English Language," addressed to the Earl of Chesterfield; and soon afterwards he made a contract with some eminent London booksellers for performing the labor of preparing the work, for the sum of £1,575.

30. The following account of his method of proceeding is given by Sir John Hawkins: "He had, for the purpose of carrying on this arduous work, and being near the printers employed in it, taken a handsome house in Gough Square, and fitted up a room in it with desks and other accommodations for amanuenses, whom, to the number of five or six, he kept constantly under his eye. An interleaved copy of Bailey's Dictionary in folio, he made the repository of the several articles, and these he collected by incessant reading the best authors in our language,

in the practice whereof his method was to score with a black-lead pencil the words by him selected, and give them over to his assistants to insert in their places. The books he used for this purpose were what he had in his own collection, a copious but a miserably ragged one, and all, such as he could borrow; which latter, if ever they came back to those that lent them, were so defaced as to be scarce worth owning; and yet some of his friends were glad to receive and entertain them as curiosities."

31. Johnson completed his task, after seven years' arduous labor, in 1755; and it is justly regarded as one of the greatest literary achievements ever performed by any man, within the same space of time. In a notice of the work in the "Gentleman's Magazine" for April, 1755, just after its publication, the following language is used: "Let not any one attempt to withhold the honor which is due to him who alone has effected, in seven years, what the joint labor of forty academicians could not produce in a neighboring nation in less than half a century."

32. The publication of this Dictionary formed a greater era in the history of the language than that of any other work. No other dictionary has had so much influence in fixing the external form of the language, and ascertaining and settling the meaning and proper use of words. Johnson was the first to introduce into English lexicography the method of illustrating the different significations of words by examples from the best writers; and his Dictionary, from the time of its first publication, has been, far more than any other, regarded as a standard for the language. It has formed substantially the basis of many smaller works, and, as Walker remarks, it "has been deemed lawful plunder by every subsequent lexicographer."

33. The next year after the publication of his Dictionary, Johnson prepared the octavo abridgment; and he revised the large work for the edition of 1773, without, however, making great additions or alterations. Supplements to it, by Mason, Seager, and Jodrell, have been published in a separate form.

34. In 1814, an edition of Johnson's Dictionary, with numerous corrections, and with the addition of about 14,000 words, by the Rev. Henry John Todd, was published; and, in 1827 there was a second edition, with the addition of about one thousand more words, by Mr. Todd. The words added by Mr. Todd, in his first edition, were mostly derived from the early English writers; and a considerable part of

them are obsolete; and of those added in his second edition, a large proportion are provincial or local words, some of them hardly worthy of a place in a dictionary of the English language.

35. The merits of Johnson's Dictionary have been by some exaggerated, and by others underrated. But though many defects have been pointed out, yet no one of his countrymen has yet produced a work that has superseded it. It would be unreasonable to expect, from the labor of seven years, a work for which "a whole life would be insufficient." If it had been perfectly adapted to the language at the time of its first publication, it would be very defective now. Many changes have taken place in the language within the last century, and there has been a vast influx of new words from the various departments of the arts and sciences. In relation to these matters this Dictionary was not designed to treat largely; and the scientific terms which it contains generally need to be defined anew, and a great many new ones need to be added; but in these departments Mr. Todd made few improvements or additions.

36. The "Penny Cyclopædia" speaks of the work as follows: "Johnson's Dictionary has been accounted the standard work of its class since its appearance in 1755; but, although it was a great achievement for an individual, and its definitions, in particular, afford remarkable evidence of its author's ingenuity and command of expression, it is, in many respects, as far as possible from being what a dictionary should be. Its etymological part (as Horne Tooke has long ago shown) is little better than so much rubbish; and it is characterized throughout by a total want of method and philosophical views. Some valuable matter has been added by the Rev. Mr. Todd; but the philosophical character of the work has received no improvement in his hands."

37. Since the first publication of Johnson's Dictionary, many other English dictionaries, of various degrees of merit, have appeared in England; the titles, dates, and names of the authors of which may be seen in the following Catalogue; but they cannot, all of them, be here particularly noticed. The most considerable of these works is Mr. Richardson's "New Dictionary of the English Language," published in 1838. This is a valuable work, which indicates an extensive and laborious research into the early and forgotten productions of English literature, and it is highly valuable and interesting

to one who is desirous of studying the history of the English language, though it is little adapted to popular use for the common purposes of a dictionary.

38. The greatest and most important work on English lexicography, that has appeared since the first publication of Johnson's Dictionary, is the production of the American writer, Noah Webster, LL. D., entitled "An American Dictionary of the English Language;" the first edition of which was published in 1828, in two volumes 4to. It is a work of great learning and research, comprising a much more full vocabulary of the language than Johnson's Dictionary, and containing many and great improvements with respect both to the etymology and definitions of words; but the taste and judgment of the author are not generally esteemed equal to his industry and erudition.

ENGLISH ORTHOEPISTS.

39. But little attention was bestowed upon orthoëpy, by English lexicographers, till after the first publication of Johnson's Dictionary. Since that time, many dictionaries have been published in which the pronunciation of the language has been made the principal object. One of the first works of this sort was the Dictionary of Dr. Kenrick, in a large quarto volume, published in 1772. This was followed, in 1775, by Perry's "Royal Standard English Dictionary," a small work, which had an extensive circulation, both in Great Britain and in the United States. "The Synonymous, Etymological, and Pronouncing English Dictionary," a much larger work, by the same author, in royal octavo, was published in 1805. — This latter is the work of Perry which is referred to by the abbreviation *P.* in this Dictionary.

40. In 1780, Thomas Sheridan, a native of Ireland, who had been an actor of some note upon the stage, and was a distinguished lecturer on elocution in London, at Oxford, Cambridge, and elsewhere, published his "Complete Dictionary of the English Language, both with Regard to Sound and Meaning, one main Object of which is to establish a plain and permanent Standard of Pronunciation." This work commanded much more attention, as a pronouncing dictionary, than any other of the kind that preceded it.

41. In 1784, the Rev. Robert Nares, afterwards archdeacon of Stafford, and one of the

first editors of the "British Critic," published the "Elements of Orthoëpy, containing a distinct View of the whole Analogy of the English Language, so far as it relates to Pronunciation, Accent, and Quantity." This is a judicious and valuable work, though not in the form of a dictionary.

42. In 1791 appeared the first edition of the celebrated Dictionary of John Walker, entitled "A Critical Pronouncing Dictionary and Expositor of the English Language; in which not only the Meaning of every Word is clearly explained, and the Sound of every Syllable distinctly shown, but where Words are subject to different Pronunciations, the Authorities of our best Pronouncing Dictionaries are fully exhibited, the Reasons for each are at large displayed, and the preferable Pronunciation is pointed out; — to which are prefixed Principles of English Pronunciation." The author had previously published a valuable work, entitled "A Rhyming Dictionary; in which the whole Language is arranged according to its Terminations." And he afterwards, in 1798, published his "Key to the Classical Pronunciation of Greek, Latin, and Scripture Proper Names."

43. In the preparation of his Dictionary, Walker made pronunciation his leading object; and for this it is chiefly valued. His design was, as he expresses it, "principally to give a kind of history of pronunciation, and to register its present state." His Dictionary has been very extensively circulated both in Great Britain and the United States. "It has been," as the Penny Cyclopædia states, "eminently successful, having gone through between twenty and thirty editions, and having superseded all other previous works of the same nature." Walker was long a distinguished teacher of elocution in London, was a careful observer, and favorably situated to become acquainted with the best usage. No other Englishman, probably, ever gave a longer, more laborious, and thorough attention to the subject of orthoëpy than he, and no other ever obtained so high and widely extended a reputation as an orthoëpist.* In mod-

ern English literature, Walker holds a similar rank, as an orthoëpist, to that of Johnson as a lexicographer. Their labors have been, in several dictionaries, blended together; and their names are, in a manner, proverbially associated with each other, as being each the first in his respective department, — Johnson for the authority and signification of words, and Walker for their pronunciation.

44. Since the first appearance of Walker's Dictionary, various other pronouncing dictionaries have been published in England, the majority of them smaller works, designed especially for the use of schools. In pronunciation, fashion is changeable, as well as in other things; and though Walker may be esteemed the best guide for ascertaining what was the pronunciation of the language at the beginning of the present century, yet a considerable change has taken place since his time, and on this account, some of the more recent orthoëpists may, in some cases at least, be looked upon as better guides, in relation to present usage, than Walker.

45. Of the dictionaries which have been published in London since the first appearance of Walker's, the one which evinces much the most investigation of the subject of orthoëpy, is that of Mr. B. H. Smart, entitled "A New Critical Pronouncing Dictionary of the English Language, adapted to the present State of Literature and Science," published in 1836. The same work, reduced in size, entitled "Smart's Pronouncing Dictionary of the English Language epitomized," was published in 1840. To the title of this Dictionary is prefixed "Walker Remodelled;" though it is more of an original work than most English dictionaries; and the author has introduced, as he states, "some twenty thousand words not found in Walker." "With changes," he remarks, "that extended to every part of the Dictionary, it is plain that the altered work was mine, not Walker's. The title 'Walker Remodelled,' which the proprietors chose to give it, had, in fact, no other foundation than the original purpose for which they had engaged me."

* Walker's employment, as a teacher of elocution, was among the higher classes and best educated people of England. The following testimony to his merit, from the eminent statesman and orator Edmund Burke, is found in "Prior's Life of Burke." "One of the persons who particularly solicited Mr. Burke's exertions on this occasion was Mr., or (as he was commonly termed) *Elocution* Walker, author of the 'Pronouncing Dictionary,' and other works of

merit, and who had given lessons in the art to young Burke. . . . Mr. Burke, one day, in the vicinity of the House of Commons, introduced him to a nobleman, accidentally passing, with the following characteristic exordium: 'Here, my Lord Berkeley, is Mr. Walker, whom not to know, by name at least, would argue a want of knowledge of the harmonies, cadences, and proprieties of our language.' "

46. The following remarks are extracted from Mr. Smart's Preface: "Walker's Dictionary, in reality a transcript of Johnson's, with the addition of the current pronunciation affixed to each word, and the omission of the etymologies and authorities, supplied for many years all that was demanded in a dictionary of its kind. But the fifty or sixty years which have elapsed since its first publication, have produced changes in science, in opinions, in habits of thought, greater, perhaps, than any similar space of time in any past age has witnessed; changes that have materially affected our language, and rendered all dictionaries in some degree obsolete, that fairly reflected its extent and application only forty years ago. The proprietors of Walker's Dictionary, finding it would slide entirely out of use unless it were adapted to the present day, engaged me, as a teacher of elocution, known in London since Walker's decease, to make the necessary changes. They believed that they imposed no greater task upon me than the insertion of new words, and the revision throughout of Walker's pronunciation; but I soon found,

that, with any chance of success, much greater innovations must be attempted. . . . Disposed, on general points, to think entirely with my predecessor, I have not had any very extensive occasion for differing from him in particulars; but some occasions have occurred, as might be expected, from the distance between his day and mine. In short, I pretend to reflect the oral usage of English, such as it is at present, among the sensible and well-educated in the British metropolis. . . . I am a Londoner, have lived nearly all my life in London, and have been able to observe the usage of all classes. As a teacher of the English language and literature, I have been admitted into some of the first families of the kingdom; as one partial to books, I have come much into contact with bookish men; while, as a public reader and lecturer, I have been obliged to fashion my own pronunciation to the taste of the day. Thus prepared, I may not unwarrantably believe that my opinion may have some value with those who seek the opinion of another to regulate their pronunciation."—See p. xxii.

A CATALOGUE OF ENGLISH DICTIONARIES.

The first part of the following Catalogue comprises not only dictionaries of English words, or of the English language, but also many bilingual dictionaries; that is, dictionaries containing a vocabulary not only of the English but also of some other languages, ancient or modern, as *Ægypt* and Latin, English and French, &c.,—dictionaries which were written for the purpose of facilitating the study of ancient languages and of foreign modern languages. All the earlier lexicographical labors in England were spent on works of this sort. No attempt has been made to compile here a complete list of these bilingual dictionaries, except in the earlier part of the work embraced in the Catalogue.

Within a century past, a great many dictionaries have been published in England, and a considerable number also in the United States, for the purpose of facilitating the study of several ancient, and of numerous modern languages. A few of these, that are particularly connected with English literature, are included in the following Catalogue; but the most of them are entirely omitted.

There are many points relating to English lexicography that are not easily ascertained. Many of the dictionaries have had their titles changed from those which were given them in the first edition; many of them have been much altered by the labor of subsequent editors; with respect to some, it is not easy to ascertain the date of the first edition; and some have undoubtedly been published which have passed into oblivion, and are now entirely unknown.

It is not easy to form an unexceptionable classification of dictionaries; and there are some respecting which it is difficult to determine to what class they most properly belong. The list of the dictionaries of the various arts and sciences, contained in the following Catalogue, is not complete. The object has been to insert all the most important ones; though there are, doubtless, some that are omitted more important than some that are inserted. Dictionaries of facts, comprising biography, geography, history, mythology, &c., also most of the glossaries to individual authors, are intentionally omitted.

DICTIONARY

OF THE

ENGLISH LANGUAGE.

ABA

A (*pronounced & as a letter, but & as a word.*) The first letter of the alphabet, and a vowel; any; one; *mas.* It is an article set before nouns of the singular number; as, a man, a tree. It is also prefixed to *few* and *many*; and in these cases it implies one whole number. — Before words beginning with a vowel, or a vowel sound, it takes the letter *h* after it, for the sake of euphony; as, an ox, an hour. (See the word **AN**). — *A* is placed before a participle or participial noun, and is considered as a contraction of *at* or *on*; as, To go *a* hunting, *To come a* begging. — *A*, initial, in many words from the Greek language, is a prefix of privative meaning; as, *subversive*, without color.

AB (*ab*) or **ÄWEX**, *n.* A Dutch liquid measure. *Crabb.*

AB-DŌN'IC, (*ab-dōn'ik*) *a.* Same as *deronical*. *Reid.*

AB-DŌN'IC-IL, (*ab-dōn'ik-il*) *a.* Relating to Aaron, or to his priesthood.

AB, *pr.* of Latin origin, signifies *from*. — At the beginning of the names of English places, it generally shows that they have some relation to an abbey; as, *Abingdon*, *Chesham*.

AB *n.* The 5th month of the ancient Hebrew or Syrian year, coinciding with our August. *P. Cyc.*

AB-CL, *n.* A sort of hemp or flax prepared from an Indian plant. *Crabb.*

ton, *Standif*.

CLEV'ER, *a.* Dexterous; skilful. *Addison*. Just; fit; proper; commodious. *Pope*. Well-shaped; handsome. *Arbutnot*.

† Johnson, after giving the above definitions of *clever*, adds, "This is a low word, scarcely ever used but in burlesque or conversation; and applied to any thing a man likes, without any settled meaning." It is, however, an old word in the language, and used by the best English authors; but it is used in somewhat different senses in different parts of England. *Coles* (1677) defines it "neat, smooth, dexterous;" *Bailey*, "skilful, ingenious, neat-handed, well-shaped;" *Forby*, "dexterous, adroit;" and *Ray*, "neat, elegant."—"In either sense,"

says *Forby*, "it is so very common and general, and appears so to have been for many years, that it seems difficult to conceive how Sir Thomas Browne should have been struck with it as a provincialism; and still more, how Ray, long afterwards, should have let it pass as such, without any remark. A colloquial and familiar word it certainly is; but assuredly not provincial, nor even low."

In the United States, *clever* is much used as a colloquial word, in the sense of *good-natured*, *well-disposed*, *honest*; and the phrase, "*clever man*," or "*clever fellow*," is employed to denote a person of good nature, good disposition, or good intentions; but it is otherwise in England.—"When a man," says *Bishop Horne*, "takes it into his head to do mischief, the public has always reason to lament his being a *clever fellow*."
